SEASONAL SENSATION!

We've Found Another Room!

THE SPECTRUM BASIC COMPILER

BLAST! is the first fully compatible OPTIMISING BASIC COMPILER for the Sinclair ZX. Spectrum and Spectrum +.

BLAST! will compile ANY BASIC program, without alteration.

BLAST! will take your BASIC programs and transform them into super-efficient code running at up to forty times the speed of BASIC.

BLAST can produce both native machine code and a compact p-code, for programs where space is at a premium.

When you have **BLASTED** your programs you are free to distribute or sell the results without any restriction.

SIMPLICITY ITSELF

Using **BLAST!** couldn't be simpler. Just load it with your BASIC program and press "C" to compile. In a few seconds the compiled program is ready. Just type RUN and see your software run up to forty times faster.

OPTIMISATION

BLAST! doesn't just compile your programs; it also applies a range of sophisticated optimisation techniques to enhance the performance of the compiled code. Any program can be compiled without alteration, but we think you will enjoy the wide range of extensions to BASIC built into **BLAST!**

BLAST! features genuine integer variables, debugging facilities, program protection, and much more. It will operate in resident mode, or with tape or microdive.

TOOLKIT INCLUDED

BLAST! provides the complete BASIC programmer's package. As well as a sophisticated compiler **BLAST!** includes a comprehensive toolkit with a full range of features including renumber, single-step, search and replace, and block handling operations. Use it to test and develop your BASIC programs before compiling them with **BLAST!**

Were you one of our Avalon compo winners? Do you fancy entering the Sunday Observer compo? Read all about it here first ... in Frontlines!

The ZX Spectrum is dead! Long live the Spectrum+! Yes, you heard right - the original Spectrum, 16K and 48K, is being phased out from Sinclair Research's product line ... rubber keys and all!

Of course, you'll still be able to buy the Spectrum - but its days are numbered. WH Smiths, one of the major retail outlets in the UK, is selling off its old Speccy stock at £99.95 for the 48K machine; the 16K model is going for £69.95 (If you can find one, that is! Ed.). And as this is probably the last chance you've got to buy yourself a piece of micro history, we'll forgive you if you don't want to read any more and shoot off down the shops.

Of course, there'll always be a Spectrum it's no accident that the Spectrum+ is nothing more than a Spectrum in a new box. To reinforce its new position in life, the Spectrum+ is now carrying the reduced price-tag of £129.99! Sinclair Research is also offering current Speccy owners the chance to upgrade (?) to a Spectrum+ with a £20 'keyboard kit'; if you're feeling lazy, Sinclair Research will do the job for you ... but it'll set you

Look closely at the home computer in this photo - you many never see its like again!

back another tenner! Vile rumours that Sir Clive is selling off the extraneous rubber keyboards to be melted down and made into puppets for TV's Spitting Imageare, of course, blatant lies ... especially since Sir

Clive's last appearance on the show!

And so it really looks as though the microwar's hotting up, especially when you note that Acorn Computers has reduced the price of the Electron in direct competition to the

Spectrum+. Good mates, Sir Clive and Chris Curry (of Acorn) were seen recently attempting to battle the micro-war on a more personal basis - but we're happy to report that they've since made

To quote the press release, Dk Tronics has a "delightful announcement for the industry". And that's that the recently-crashed Currah Micro Products has been swallowed up in the arms of the Dk

anyone holding a guarantee from Currah will find that Dk will honour the original agreement - so your Currah equipment is safe for a bit longer!

as to your warranty arrangement, give Dk a ring on (0799) 26350.

empire. The good news is that

If you're a bit worried

As from the next issue of Your Spectrum, we welcome a new slave driv ... er, Editor on this illustrious mag.

Author of the sarcastic comments you've come to know and love (What's all this? Ed.) will now be one, Kevin Cox. As usual, any attempts to get hold of the Your Spectrum 'Hey, tell 'em I'm in a meeting' Editor can be made on 01-631 1433. Anything more technical than a friendly chit-chat should be directed to Troubleshootin' Pete who sits patiently awaiting your calls on 01-616 2416 (YS Helpline calls should be made on Wednesdays and Fridays only).

New YS Editor, Kevin Cox. (April fool! Ed.)

Incentive, a company which actually cares about its customers, has announced the winner of the Ket Trilogy

competition.

Tom Frost, aged 47, from Montrose collected his £400 of video equipment from Ian

Andrew (Incentive MD) and Richard McCormack (author of the adventures). This news arrived just as Incentive was about to launch its officially licenced version of the arcade game, Moon Cresta. The incentive to beat Moon Cresta comes in the form of Nichibutsu's original Moon Cresta machine. To get hold of this free standing wonder, all the player has to do is amass a score of 30,000 points.

Moon Cresta is now available for the Speccy at £6.95 from usual dealers. More details of this and Incentive's new game, Confuzion, on (0734) 591678.

HE'S HERE! HE'S MADE IT!

Son of Blagger for 48K Spectrum

Relive the daring exploits of Roger the Dodger through his prodigy Slippery Sid. More skill, more nerve, this cool little character seeks not only to follow in his famous parent's footsteps, but to establish some amazing feats of his own. Money's not his game. Espionage is his middle name and having forced his way into the National Security HQ he's faced with a no return journey through one of the most dangerous, most complex buildings in the land. Can he successfully complete a nerve tingling search for the golden keys — his only means of escape — or this time has his skill and daring taken him too far. Watch out for those weird killer security guards — you never know what chilling killer security guards – you never know what chilling surprises the mad scientists have produced – and beware the floor doesn't disappear from under your feet, sending you to an early grave.

Available from all good dealers or direct from:

Alligata Software Ltd 1 Orange Street, Sheffield S1 4DW Tel: (0742) 755796

WIZARD WINNERS

Following the enormous response to our Avalon Competition (YS issue 11), we're now proud to announce the winners. There were, in fact, only 15 differences, although some of you thought there were up to 28 mistakes in our piccy (Perhaps you were counting mistakes throughout the whole mag. Ed.).

The lucky winners of the compo, the one our Editor picked out of the

golden dustbin-liner, was Colin Waters from Clacton-on-Sea, Essex. Well done Colin - the goodies are on their way!

And the 20 runnersup, in no particular order, were:

Auron Marsh, Farre Bolton, East Yorkshire: Mr HR Wharton, Laton; N Ashall, Manchester; Mr I Traverse, Merseyside: R Campbell, Aberdeen; Stuart Harding, Barry: I Smith, Hyde Park; Matthew, Cowbridge; Mr Sharp, Dundee Elaine Lucia Corrie, Paisley: Philip Yale, Sunderland; Philip Squire, Walsall; Colin Howson, Londo Mr D Adams, Ilkeston; Gordon

s. Dundee: Ian Roberts Hatfield: Tim Ashton, Leicester Gary Sadler, Worsley and Chris Butlin, Bedfordshire; Phew

Well done everyone, you all get a copy of ZAP, Hewsons' latest machine code development system!

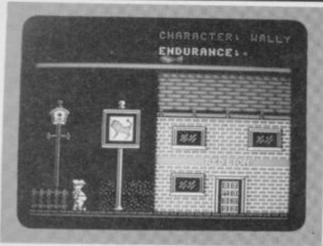

This month we see the start of a national competition in the Observer Colour Magazine to weed out the best Spectrum buffs in the country.

Co-sponsored by 'ever-lovable' Sinclair Research and top software house Quicksilva, the contest is designed to test computer skills as well as games-playing competence and strategy. The compo is based around Quicksilva's slightly geriatric Xadom maze game, and there's a trip to the Epcot Centre in Orlando's Disneyworld for the outright winner, plus runners-up prizes of QLs.

Our beloved Editor (Just! Ed.) Roger Munford is leading the panel of judges so you can naturally expect us to be following the competition very closely and, in the same vein. we naturally expect you to enter. After all, you are our dedicated readers, aren't you?

As all the questions in the first four stages of the competition are based around Xadom, it might be a wise idea to fork out the £4.95 And, as all the clues are being published in The Observer Sunday Magazine, that might be a wise investment as well!

Quicksilva can be found at PO Box 6. Wimborne, Dorset BA21 for those who want a copy of Xadom to practise on. For more details, watch this space next month.

A drunken scene from Mikro-Gen's Everyone's A Wally.

Mikro-Gen yet again takes the software

industry from the sublime to the ridiculous (0344) 427317.

with its cartoon hero, Wally Week. Wally. would you believe, now has his own theme tune!

The ditty is entitled Everyone's a Wally and it's been written by John Watkins and performed by Are you being served? celebrity, Mike Berry

And it doesn't stop there! Mikro-Gen tells us that it now has several major record companies interested in cutting a disc and one even wants to make a Wally Week video!

Mikro-Gen are on

If you're having hassles with your hardware, get in touch with DIY demon Stephen Adams, Your Spectrum, 14 Rathbone Place, London W1P 1DE.

Well, if I can say it's nice to hear from you all, without sounding like I look forward to hearing about all your troubles, I will! Keep sending your letters in ... and I'll answer as many as I can through this column.

My first query came from Mr Newby of Kendal, who seems to be having problems with the SoftROM project in

YS, issue 2. Having used 64K chips to allow it to be used as a memory add-on, he found that the finished article wouldn't work!

Well, my solution isn't perfect — in that it only gives 32K RAM without an external refresh chip - but here goes! Swop A7 and A14 connections and disconnect pins 13 and 14 from the edge connector, and connect them to zero volts. This will give you the SoftROM because A7 is always binary zero during refresh. I'm afraid, as suggested in a letter in YS, issue 4, this circuit can't be used to provide an extra 32K to a 16K machine — this would require 2552 (32K) chips, or 4164s with the decoding altered so that the CAS and ROMCS only operated when A15 is binary one. To get hold of the bits you'll need, contact Maplins Electronics, PO Box 3, Rayleigh, Essex SS6 8LR. On a more enthusiastic

note, Jim Colburn wrote in to ask where he could get supplies if he wanted to set himself up as a repairer of Spectrum gear. I'd say you

couldn't go wrong enquiring at CPC, 194 North Road, Preston, Lancs PR1 1YP. After all, Sinclair Research use the company, so it should be good enough for you! Good luck, Jim.

Patrick Kerr had the misfortune to connect his Speccy to a faulty 32K RAM pack, only to find the -5V and +12V rails were disabled. Restoring transistors TR4 and TR5 restored the voltage rails, but caused the screen to flash and a continuous beep to sound.

The problem could be the transistors across the Z80A which decodes A0 for the ULA - and I'm afraid they might have blown. The other alternative is a little worse ... the RAM chips or the CPU itself could be damaged by the loss of power (while the +5V rail was still running) which would have put the address or data lines permanently at binary zero. I would suggest you take it along for a professional repair.

Our next worrier was James Cridland who's the proud owner of an issue one 16K Spectrum. He's having

problems getting any speech synthesisers to work with his computer - so far, he's been through ones from Currah, Vox and Datel Electronics. Whew!

Methinks the fault lies with the SP80 decoder as it operates each time an I/O memory map access is made. Each time you use it, the top of memory (32K) which contains the machine code stack swop pages — this totally destroys the Basic ROM's idea of what it's doing. Removing the decoder should allow it to work. One thing, though, I thought the Currah speech device only worked with 48K models?

Well, that's it for another month. I'm here should any of you need any advice with any hardware problems, be they in the Spectrum itself or one of its many peripherals. Don't ring, I don't work in the offices, but write to me care of the Your Spectrum offices at 14 Rathbone Place, London W1P 1DE. And, please, don't send any damaged gear to me personally ... I can only give advice — I rarely carry a spanner around with me!

EDUCATING TEACHER!

The Hi-Technology and Computers In Education Exhibition, held recently at the Barbican Centre in London, attracted many teachers to its stands. As Mr Robert Dunn, MP responsible for the MEP (Microelectroniccs Education Programme) pointed out, "the idea is to educate innocent teachers into the complex realities of what the micro market has to offer them"

To say the micro industry turned up in force would be an understatement. But

MP Robert Dunn patronising (sic) the Hi-Tech exhibition.

then, considering that over £100 million has already been blown by various government schemes to introduce computing at all teaching levels (from Primary schools up to Universities and Polytechnics) it's hardly any wonder that the major manufacturers and suppliers are all hungry for a piece of the

action!

The public response to the event was so great that at one point, even the seminars were turning people away! The stands weren't too crowded, but the 'No under-18s admitted' sign did seem a little incongruous ... until, of course, you noticed that there were so many adults indulging their childish whims, there wouldn't have been any room for the under-18s anyway!

GO-FASTER

ADD-ON FOR C5

Look Mum, two wheels! Which Bike?'s Willis has a smashing time ...

Well, it had to happen! Someone had to take a POKE at Sir Clive's "new power in personal transport".

Exploiting the Sinclair Research accessory offer of an educational battery to double the effective range of the vehicle, certain sources are marketing thoroughly illegal wiring kits that promise to double effective speed. Trickery is apparently based on series battery connections.

As ol' Sir C's technical chappies have pointed out, the actual result is a burnt-out motor rather than a souped-up gochart. So, here's a warning for all those parents out there thinking of purchasing one of Sinclair's 'less than finest' - if you see your young sprog zipping round the neighbourhood at frightening speeds, it's worth checking to see if the Hoovermatic's been looted for more traction!

HACK/NG AWAY

All the POKEs and more! Send your hacking hints to Andrew Pennell, Your Spectrum, 14 Rathbone Place, London W1P 1DE.

Hello, and welcome once again to the back street hacking shop. Those with brains less withered than mine will recall the 'in depth' treatment given to Scuba Divea few issues back (My, how time flies! Ed.). Well, Andy Orchard has written in with lots of tips on how to muck around with it.

First off, to get the POKEs in, you've got to load the program as usual, choose the LOAD option offered and, after confirming it by pressing the 'Y' key, press the Break key. You're now free to enter the POKEs and, to finish off the loading process, type 'GO TO 2' and press Enter.

The obvious POKE to start

off with is for varying number of lives — POKE 55711,x (where 'x' is the number of lives up to 255). The only problem is cramming in too many divers into the boat onscreen.

If you're playing an opponent, POKE 45696,0 will ensure your opponent's clams take a considerable time to open - that should mean your opponent runs out of air pretty quickly and you end up winning (heh, heh!). Of course, be sure to have your turn before entering the POKE you wouldn't want the plan to backfire, would you? Andy also found a bug in Scuba Dive that occasionally results in the diver being reprinted in the Status chart; as a consequence, our diver gets towed along like a water-skier when the boat moves off. Has anyone out there fixed it yet?

Moving on to one of my personal favourites, Quicksilva's Fred, Paul Margetson claims to have found the ideal solution for all cheats. It requires a little work to enter because of the loader program. Paul says that his girlfriend gave him 'invaluable help' in finding the information given here. But, without elaborating any further as this is an (almost) respectable magazine, let's get on with the hacking.

First off, type 'LOAD ""
CODE 26384' and play the
tape. That done, type 'SAVE
"FRED" CODE 34500,

22650' and save it to an empty cassette. Now, to load your newly-created game, type 'LOAD "' CODE 24500'. It won't autoRUN anymore, so you can enter the POKEs given here as direct commands. Once you've modified it to your requirements, enter 'PRINT' USR 30285' to start the ball rolling ...

Getting back to the POKEs, you can make your last unit of power everlasting with POKE 31175,0 - and if you want to vary the amount of power, POKE the number of units you require into addresses 30418, 31592 and 44696. Paul recommends a maximum of 240 units and, using these, he mentions that after level six you can choose the number of nasties in the mazes that follow. By the way, he recommends the Mark 2 version of the Picturesque monitor (which he used for hacking away at Fred).

Entering the jungle world of Sabre Wulf, I remarked a couple of issues ago that I couldn't find the necessary POKE to keep Sabre Man permanently cyan. Well, Nigel Salt has come up with the goods (who's a clever boy then?) and they are: POKE 44685,186; POKE 44676,255; and POKE 44677,80. Many thanks Nigel!

Kokotoni Wulf has been hyped as being better than our of friend JSW though it's revealing that, up until now, it's never had a mention in this column — unlike its illustrious

rival. To redress this imbalance, Nicky Quinn has gone to the trouble of dropping me a very useful letter ...

To begin with, you'll need to stop the program in the following way. Load the program as usual with 'LOAD "", but as soon as the first section of code has entered and the PAPER colour turns green, stop the tape and don't rewind it. Next, reset the Spectrum and enter:

10 CLEAR 24100: LOAD *** CODE: RANDOMIZE USR 65100: LOAD *** CODE: POKE 43742,0: POKE 42177,2: RANDOMIZE USR 41200

RUN the program and then start the tape up again. The POKEs above can be altered to suit your taste. The first gives infinite lives, but you can change this to POKE 42214 to give you an option on the number of lives if you don't want to make it too easy. The other POKE simplifies matters by changing some of the sprites to red so that they don't kill you on contact. And to show that there's no bias on this page, I'm able to report that Nicky prefers to use the Dk"Tronics Distron 48 monitor. So there!

Finally, Richard Glass came up with a good challenge for all you hackers ... how about a POKE or two for *The Hobbit* so that those who can't finish it (myself included) (*Me tool Ed.*) can take a look at the final screen.

ond the Spectrum. TURBO INTERFACE just £22.95. grip - a snip at £9.95. SPECTRUM UPGRADE KIT Costs just £9.95. possibilities! Only £21.95. URBO INTERFACE Trade and export enquiries welcome

Four great new add-ons from Ram, Number One in everything for the Spectrum...

Our unique Turbo Interface outperforms any Spectrum interface - it works with ROM cartridges, 2 standard joysticks, and there's a full expansion bus at the rear. The Turbo supports Kempston, Protek and Interface 2 software and loads from cassette - or instantly from a ROM cartridge. It really makes the most of the Quickshot II's rapid-fire action, and with a unique built-in power safety device, it's amazing value at

QUICKSHOT II AUTO RAPID-FIRE JOYSTICK

The famous Quickshot II is the top games joystick, with a sleek trigger fire button for quick reactions, an auto fire switch for continuous shooting and a new, improved grip. Revolutionary built-in stabilising suction cups mean a sure, firm

SPECTRUM INTERFACE

Boost the power of your Spectrum, or Spectrum +. This Kempston-compatible interface gets the most from your games - electrify your enemies with real power and lightning-fast reactions right under your fingertips.

SPECTRUM UPGRADE KIT

If you've a 16K Spectrum micro, this handy and inexpensive add-in kit boosts the RAM memory to a powerful 48K, so you can run the latest and greatest software, the most exciting games around - and expand your own programming

Where can you get your hands on Ram's amazing Spectrum add-ons? You can see them at branches of Boots, Menzies, Spectrum Group computer centres, and good computer stores everywhere. Or return the coupon below.

GO FOURTH!

Microscope's Guy Kewney — pick up thy micro and talk!

Channel 4 has taken the plunge ... and come up with a computer chat show called 4 Computer Buffs. Geddit?

Produced by the Database team, C4 calls it "a weekly news and current affairs programme for serious computer users". Back in the early days of computing, Edward Barnes, the then head of children's programmes at the BBC, said that computing shows were "looking through a glass darkly". It'll be interesting to see if C4 has managed to break

the mould, and produce a show that's actually worth watching! But, of course, we'll all just have to wait and see ...

C4 also announced that it's launching an adaptor for the Spectrum (manufactured by OEL) allowing users to 'download' programs from it's own 4-Tel teletext service.

Channel 4 will be happy to tell you more about the adaptor and the new 4 Computer Buffs show on 01-631 4444.

KEYBOARD KAPERS

Nordic, the company that bought up all the Fuller stock in the liquidation flurry of last year, seems to have got itself in the same mess at its forerunner — perhaps the disease is catching!

Ex-Fuller man, Neil Roberts, told YS that Nordic has laid of all its staff and gone into voluntary liquidation. Here at the YS bunker we were hardly surprised to hear the news. Our very own Tony 'Slim' Samuels wrote a program for Fuller early last year, the idea being to fully demonstrate the versatility of the Fuller Master Unit. But, as Fuller never officially bought the rights to the program, Tony got

decidedly twitchy when

he saw Nordic using it

at the first - and last -

Microfair the company

attended.

Apart from the threatened court injunction from our friend Tony, ex-fuller MD Roy Backhouse, also stepped forward to remove the copyright of the FDS keyboard from Nordic — which effectively meant that Nordic wasn't able to make any more of the

units. No product equals

no turnover and this left Nordic in the proverbial....

Further bad news comes from scouser Neil. The word is the so-called 'ultra-improved' version of the FDS keyboard is actually no different from the Fuller unit — apart from the logo sticker, and it still didn't work with Tasword Two.

The moral of this sad and tearful tale? Well, apart from the clear realisation that it's not a wise idea to mess with our large Mancuncian friend, if you're going to pay good money for the rights to a crashed

company, then take a good look at what you're actually buying.

Nordic on a good day! (It was a Tuesday, wasn't it? Ed.)

FROM THE H/I

Troubleshootin' Pete Reporting...

Pete's phone lines are open from 10am-1pm and 2pm-5pm on Wednesdays and Fridays. Ring him on 01-636 2416 Major problems this month with those moody Microdrives. Simon Goodwin, Mr ZIP himself, phoned and asked me if I knew why his 'drives should suddenly have begun whirring round in spontaneous fashion — taking no notice at all of lord and master!

Well, I too have had the odd 'runaway' — usually with important YS material onboard! — and I've traced the cause down to the simple fact that the TV (or another such interfering piece of equipment) is sat too close for comfort to the 'drive. By moving everything as far away as possible, you'll probably find that the erratic devices will work as they were originally intended. Obviously, if this fails to do the trick, then the next move is to go back to your dealer. Alternatively, it's been suggested that you jump into your C5, drive (very slowly) to Cambridge and attack the 'bearded one' personally with your duff

gear... but I certainly couldn't condone such irresponsible action!

An interesting chap by the name of Roger Freedman called in this month with a query that will probably strike a chord with those of you who have been impressed by the hacking hints we give in the mag. Roger expressed himself quite taken by the whole business, and wanted to know how best to take the plunge himself.

Hacking is a developed technique, and although there are no short cuts as such, there's a formula which, if you follow it correctly, will put you on the right path. What hackers actually do is learn Z80 machine code as though it was their second language—they're then able to read through assembler listings (like the ones we print in YS machine code features) and understand them as well as the written text of a book!

In simple terms, though, it's just a case of locating the

reduce lives (or whatever) and cancelling/changing/adding the necessary POKES. A good book to start you off on machine code is either our own Toni Baker's Mastering Machine Code On Your ZX Spectrum (published by Interface Publications), or lan Logan's Understanding Your Spectrum (published by Melbourne House); the latter, by the way, as the title might suggest, is an essential userguide for readers of this illustrious rag. Actually they're both very good books, written by two of the top Spectrum gurus in this country.

Finally, may I repeat the plea that I am not in the least 'hacking literate'. Phoning me with problems of that ilk is just a waste of your hard-earned cash. All you cheats would be far better advised to drop a line to Andy Pennell (who pens our Hacking Away column) and tell him personally of your deviousness

and deceit!

RIPPER FLIPPER

Dolphin Adventure Holidays is yet again offering its world of excitement to the under-18s this Summer.

If you're planning your Summer holiday this year and you'd like a mix of outdoor/indoor activity, interspersed with a smattering of Spectrum computing, that's what Dolphin has got in mind.

Throughout the country, in such exotic places as Beaconsfield, Cobham and Crowthorn, Dolphin's holiday camps offer a wide range of 'things to do'. On the computing side, you can learn 'basic' programming and what's called the 'advanced' course. There are also activities such as swimming, horse-riding, surfing and so on.

Prices for the week's stay at a Dolphin computer camp start at around £144 + VAT. For more details, and a chance to ogle the pictures in its glossy brochure, phone (0444) 458177.

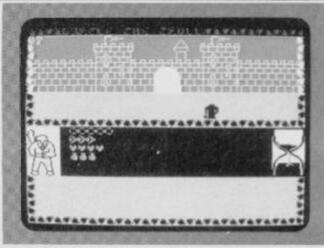

Matching jumpers at Dolphin. (Yuch! Ed.)

TAKES TWO TO TALISMAN

Claiming that it had 'the first ever interactive multi-player arcade adventure', Games Workshop launched the Spectrum version of its fantasy game, Talisman.

The program, which can involve up to four players in any one game, is said to be the true successor to Valhalla. Talisman is a race to reach the 'Crown of Command' and control the destiny of the world — of course! A horrific array of deadly creatures are out to stop you in your task, including those that are controlled by the computer and the other players.

GW's Talisman - Valhalla's follow-up?

As, at the time of writing, we at YS haven't actually seen the game, we can only ask you to believe what Games Workshop are letting on.

Try looking out for Talisman in the usual outlets at £7.95 — but if you have any problems, give Games Workshop a bell on 01-965 3713.

MORE FROM CHEETAH

At a time when several home computer manufacturing companies seem to be encountering all sorts of financial problems, Cheetah Marketing has released details of a product that it's going to be launching over the coming months.

Boasting not only a new joystick interface, a 56-way extension cable for the Speccy's user port (for under £10) and a two-way aerial adaptor for computer/TV input (for under £2), the company's also screaming about an entire new range of

games for the Spectrum and Spectrum+. (The Spectrum+too! Now there's a thing. Ed.)
And that's all Cheetah's giving away at the moment. But if it's more details you're after, ring Cheetah Marketing on 01-833 4909.

ACONCURRENT AFFAIRS

For all the news and views on the QL micro, dispel those rumours with John Torofex!

ART FOR ART'S SAKE?

Not content with QL Easel, companies like Talent, CP Software and Eidersoft are all releasing graphics packages; and, of course, all are claiming that their product is by far the best on the market!

The one from Talent will apparently be based around the Commie 64 package Panorama, one that's quite amazing considering the 64's awful pixel resolution. So what, one wonders, are we going to get on the QL front?

CP Software is still working on its advanced graphics package and wouldn't be persuaded to divulge details. But Eidersoft's package QL.

Art is already released and will set you back £14.95. I wouldn't want to sound mean,

but I'm not too sure if it'll stand up to what the opposition has planned, but if you'd like to phone Eidersoft, the company is on 01-478 1291.

STOP THE SQUEEZE

Isleworth-based Digitex Computer has launched another of those ever-useful utilities, this time one that allows you to make more use of your Microdrive cartridges.

The package is called STOP (STorage OPtimiser to you and I) and it squeezes programs down to roughly half their size when stored on 'drive. Not only does this mean all you micro misers can avoid shelling out hard cash quite so often, but it also opens up possibilities for large databases to be stored on a single cartridge.

Digitex is also promising the appearance of a Winchester version, something which should have you shuddering with anticipation at the storage possibilities.

For more details, write to Digitex at 4 Amwell House, The Woodlands, Isleworth, Middlesex.

QL'S BUSINESS CARD

OL+ Limited has produced a handy plug-in device which it describes as, "the first product to transform the QL into a true business computer" (So what was it before? Ed.). The card plugs into the QL's main expansion port, allowing it to run CP/M-80 software. It contains a Z80 chip and 64K of RAM and also offers two eight-bit ports with 64K of print buffer space.

Seeing that WH Smiths is apparently transfering the extensive CP/M-80 software library on to cartridge form for QL Microdrive use, at £199, this gadget might just make a worthwhile investment for that businessperson we keep hearing about.

THE QUEST BUSINESS

Quest Automatic has a new range of packages for converting the QL into a 'serious' business machine. The main item is a 68K version of CP/M and the 28.5K operating system is available on 5½-inch floppy

disk at £49.50. The equivalent Microdrive cartridge, complete with assembler, which coresides with QDOS is £79.50. Quest also has a range of disk drives for the CP/M, from the 200K floppy at £249 to a selection of Winchester disks starting at £995.

It can also supply extra internal RAM from 68K to a cool half-megabyte and the whole caboodle can be stored in an expansion console for a mere £109. Two of the new business packages are also compatible with Psion's QL packages, so data is interchangeable — an advantage Quest cleverly intends to continue.

PLUGOLA!

YS's own Peter Shaw has been busy recently (That makes a change! Ed.) writing two books that'll be available by the time you're reading this. One is Games For Your QL (published by Virgin), which at £2.95 just about scrapes into the 'value for money' ratings. The other is Games QL Computers Play (published by Corgi/Addison Wesley). Anyone still wondering why the YS Editor bikes into work while child prodigy Peter Shaw drives a gold-plated C5?

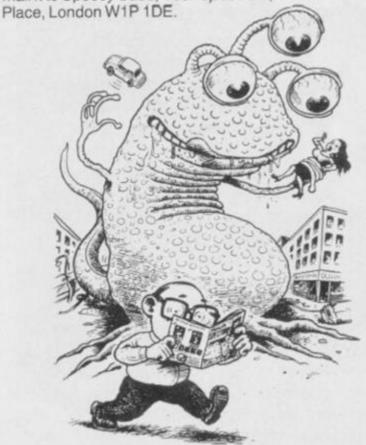

INTERGALACTIC ROBOTS LTD., UNIT 208, HIGHBURY WORKSHOP, 22 HIGHBURY GROVE, LONDON N.S.

CODEBUSTERS!

I've just this minute put down Terry Bulfib's Codebusting article (YS, issue 11) and I'd like to add my fivepennyworth!

He describes a protection system that only works if you avoid the use of GO SUB in your programs. Actually, GO SUB — and all the other control structures, such as WHILE-WEND and REPEAT-UNTIL — are simply fancy ways of dressing up the GO TO command. Therefore, any lazy programmer can jump about in a program without wreaking the kind of abuse possible with a naked GO TO statement.

It's quite easy to simulate GO SUB in the following manner:

10 PRINT 'Start of program"
20 LET return = 30: GO TO 100
30 PRINT "Back from subroutine"
40 STOP

100 PRINT "Now in subroutine" 110 GO TO return

You can use the subroutine at line 100 from anywhere in the program, changing the value of 'return' as appropriate at each call to make the program jump back to the correct part. If you're nesting these GO SUBs, you'll have to use different variables — return1, return2, and so on — so that you don't RETURN to the wrong place or overwrite a nested return point.

Of course, it's easy to simulate all the other so-called 'structured' commands mentioned above. All you need is a condition in the right place and a bit of self-control.

Peter Green, Chingford, London

Hmm, that name rings a bell ...
Anyway, Pete, thanks for that
— and a plea for any other hints
and tips any of you lot out there
might want to give us regarding
Terry's article. Ed.

SPECTRUM+ SNAG!

I'd just like to warn all readers who've just purchased a glorious Spectrum+ that it's no use looking to get hold of the Kempston joystick interface. It just won't fit! You'd be much better advised to check out the Pro joystick interface — the three port holes lay flat ... and the device fits just fine.

Stuart Free, Canford Heath, Dorset

Absolutely right, Stuart! OK,

FORUNA

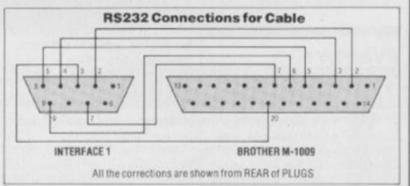

Is there something you're not telling us? Don't miss out on the chance to win a bundle of free Spectrum software for each month's Star Letter! Write to Forum, Your Spectrum, 14 Rathbone Place, London W1P 1DE.

BROTHERLY LOVE

With reference to Alastair McIntyre's letter, published in Forum, YS issue 11, I too have a Brother M-1009 Printer, and I have successfully connected it to my Spectrum and Interface 1.

I have drawn a diagram

which should be of some use to Mr McIntyre, showing the connections necessary between the Interface 1 port and the Brother connector. David Poole, Stevenage, Herts

Kempston, what are you going to do now the original Spectrum design's been shelved by Sinclair Research? We await your latest interface with bland enthusiasm ... Troubleshootin' Pete.

SCANDAL!

You better start taking some notice of Forth in your magazine, or else I shall be forced to sell the photographs I have of the Editor of YS and 'you know who!' to the Sunday papers. I shall then make myself enough money to be able to buy all the rights to Your Spectrum and sack you from the position you now hold.

And if I'm feeling really evil, I'll make you play Jet Set Willy non-stop for two days! Mr 'T', Newry, Co Down

Oh boy, we don't half get 'em on this magazine! I really don't know what to say ... yes I do clear off, schmuck! Ed.

MC2 - MY THEORY IS...

In the article Machine Code Commands (YS, issue 11), there was a mistake in the machine code listing. Three lines before the 'BACK' label, you've printed an instruction 'LD(23613), HL'. This should have been 'LD(23613), SP' so that when an error occured, the BACK address is POPped off and executed.

It would also be nice if you could include, in your Joystick Jury section, whether or not the games you review are easily modified to work with Interface 1 and Microdrives.

R Black, Carrickfergus, N Ireland

Thanks for the correction. As for your suggestion for Joystick Jury - yes, we'd love to be able to suggest how you modify games so that they'll work on Microdrive, but it seems that we could be liable for prosecution if we did! The copyright laws are a bit confusing as regards software, especially as there's yet to be a test-case. In the meantime, take a look at our article, Microdrivin', in this issue - just 'cause no-one else in the industry's supporting the Microdrives very much, it doesn't mean we're going to ignore them! Ed.

SOMEONE POKE PETE!

Will someone please give Troubleshootin' Pete a swift kick in the user port.

In his column, 'From The

Hip' — YS issue 11, he warbles on about copying a one line loader down on paper if it's got a line number zero.

Line number zero cannot normally be used, and as it stands it cannot be edited either. To change line zero to another line number, do the following:

POKE (PEEK 23635+256*PEEK 23636)+1,x

Where 'x' is the number you want the line to be. It's then possible to edit the line as normal, instead of all that writing. If you wish to use the line zero in your own programs, then put the line you want at zero at the start of the program, for example '1 REM (c) MICK', and then POKE as before, but replace 'x' with zero. Line 1 then becomes line zero — good, eh?

Where can I pick up my bronze Trainspotter award? Mick, Wolverhampton

Listen, we'll have less of this violence if you don't mind - I get enough aggrevation of the earlobe from the Ed. You're right though, I have to admit it - once again! Maybe it was my over-indulgence over the Christmas period that made me forget that particular method. And why, I ask myself, are you content to achieve a mere bronze standard Trainspotter award - what about silver and gold? Still this is all immaterial 'cause you're not getting nothin' anyway. Troubleshootin' Pete.

EVERY PICTURE...

Firstly, may I congratulate you on a superb magazine; you have successfully produced a good mix of games versus programming/peripheral articles with just enough lighthearted comment to make it very readable. And while I'm here, can I make a couple of points arising from articles in the December/January issue?

In answer to Richard Harrison's letter (Forum, YS issue 10) transferring commercial programs on to Microdrive for ease of use, Troubleshootin' Pete suggests that including a 'Microdrive SAVE' option in commercial programs is the obvious solution, but that there's no real gain to software houses. Hah! Wrong Pete ... our Assembler and Monitor programs contain this option, and I feel that the good-will thus generated outweighs any piracy problems, especially as full Microdrive compatibility is FORUM

essential for such utilities.

With regard to the various versions of the Interface 1 ROM highlighted in Andy Pennell's article (Interface ROMS - The Inside Story, YS issue 10), both our Assembler and Monitor are compatible with versions 1 and 2 of this ROM (detection of the ROM type is automatic). As the hook codes are not sufficiently flexible for the needs of our software, we have had to CALL routines in the Microdrive ROM, bypassing the hook codes. So, complete compatibility is possible with all Interface 1 ROMs ... and don't let anyone tell you any different!

Martin Ridout, Picturesque

Couldn't agree more, Martin. Since we began the final stages of YS MegaBasic, one of our major concerns was to make sure it was Microdrive compatible as well as operational with all the Interface 1 ROMs Sinclair Research could throw at us. How else would we be able to complain bitterly about software houses' treatment of the ZX Microdrives, if we did the same thing ourselves? Ed.

THE CRUELLEST CUT OF ALL

Someone in their great wisdom has placed the YS MegaBasic coupons so that they back on to pages of text, and I'd like to know if you'll accept other bits of the magazine in their place. You don't really want me to cut your fine produce, do you?

Kenneth Hardacre, Yorkshire

A photocopy of the coupon will do just fine ... or if you wait a couple of issues, you'll be able to take your pick of the coupons as there'll be one in each! The artist responsible for the ghastly error was threatened with having to work on one of the other computer mags — so I don't think we'll have any trouble from that quarter again. Ed.

KEYBOARD COWBOYS?

Could you please help us regarding Fuller Micro Systems of Liverpool? We've tried to 'phone the company unsuccessfully on five different numbers about my son's keyboard which he saved for out of his paper-round earnings. We have written to Fuller asking why the order has not been fulfilled, but we have never received a reply.

My son is most upset over this as it's a lot of money for a young boy.

Mrs Spring, Stockport, Cheshire

Unfortunately, as you will have probably realised by now, Fuller has gone into liquidation so I'm afraid the chances of your son getting his money back look bleak. We've also just heard rumours that the company who took over Fuller, Nordic Systems, have also gone bust! Quite where this will leave customers who've ordered keyboards, we'll just have to wait and see. Sorry not to be of more help at the moment ... but as soon as we at YS find out what's happening up there in Liverpool, you'll be the first to know! Troubleshootin' Pete.

AVAST YE PIRATES!

I have a master plan for the total annihilation of software pirates as we know them in Britain — well maybe not, but it' still a good idea.

Instead of all this fast loading headerless rubbish, what about a totally pirate-proof system for about £1-£2 above the normal cassette price? Sounds

pretty good, huh?

Well, here it is - dongles!! No, I'm not swearing at you, I'm talking about a relatively cheap piece of hardware that would plug in the expansion bus. It would be about the size of one of the small Sinclair Research games cartridges, and there would be separate dongle for each commercially available title. The small dongle would be plugged into the interface each time the software was to be used - and, if the dongle wasn't there, the program would crash.

But the use of the dongle doesn't stop at just protection — it could also be made into a simple sound synth, or a beep amp, or even a joystick

interface.

Although this would probably be only of interest to the larger software houses (and may raise the price of the cassette by a couple of quid) this is surely a better price to pay rather than the havoc created by software piracy.

Chris Hall

Chris Hall, Belfast, N Ireland

Dongles are not exactly new.
Companies like Microdeal
have already tested the market
with them. Unfortunately,
dongles add extra cost to the
package purely to protect the
manufacturer and they aren't

totally pirate-proof anyway! However, your idea of building a practical use into the dongle sounds quite good and could provide the incentive for shelling out the extra cash. Troubleshootin' Pete.

MIS-READ?

I feel that it is time to set the record straight. In his reply to the letter 'MIS-TIMED' in YS issue 9, Troubleshootin' Pete got it right. (It's not often he's right, so please put this in big print!).

John Kinory, on the other hand, got it wrong when he claimed that TP's answer to Patrick Fox's letter on the Ian Beardsmore article was wrong.

Pete said that "The Spectrum doesn't do a normal NEW, it performs a system reset", in which he is right. But Mr Kinory seems to have misread the article when he tells of how the NEW is not a system reset, just as Pete explained.

There — one piece of pedantry over. (And one point for our team! TP).

Next — in YS issue 10, Mr Beardsmore listed his base 255 numbering system. Well, while it is indeed a useful system, it's not base 255. Take my word for it, it's base 256!

Still, I like the mag — it's nice to see a computer magazine that's not aimed at 14-year olds!

Alan Potter, Glasgow

It's nice to have someone stand up for me now and again — and while we're proving John Kinory wrong, I had a word with Ian over the timings in Spectrum Crash Theory and he told me that his measurements were taken with an Issue 2 Spectrum with a coakroach. So Ian was right, you're right and (wowee!) I'm right too! Troubleshootin' Pete.

GREETINGS FROM ALPHA

On behalf of the entire population of Alpha. Centuri, may I inform ol' Captain Critical (YS issue 11) that we saved ourselves from the black hole over six months ago, and we don't want any interfering busibodies unbalancing the delicate equilibrium of life we have going up here. Got that?

Anyway, I must say that we got a big shock up here on this distant planet when it appeared that you were going bi-monthly (it's logical thinking from the Dec/Jan issue). This would have been disasterous to our economy! The newsagent

industry would go sharply down-hill — the Alpha Centuri Culture Council has made YS compulsive throughout the whole planet — but with only six issues a year, the consequences would be unthinkable!

Zrable Greenspam, Member of the Generally Uncoordinated Joystick Club, Alpha Centuri

RGB ADAPTATIONS

In your Dec/Jan issue, you mentioned the RGB interface for the Speccy from Adapt Electronics. I thought that your readers might be interested in a few details.

Fitting: it plugs into bus, but it doesn't have an expansion port. So, if you have other goodies, like joystick interfaces without through ports, then you could be in for a spot of bother. As I only bought the interface, I didn't have this problem!

Setting up: the RGB socket on the side of the interface has a pinout compatible with that of the BBC Micro, so you should have no problem obtaining a monitor lead. My monitor, an Electrohome JVC, had been previously used with my Oric, so for me it was just a quick job with a hot soldering iron and a DIN plug and 'away

A little hole in the underside of the black box allows access to the trimmer, which you may have to adjust to obtain the best results. I also had to adjust the horizontal hold on my monitor to stop the top line bending over a little — but now I have a perfect picture.

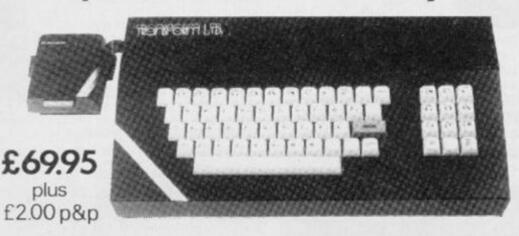

Summary: well, you lose the effect of BRIGHT 'cause everything appears as BRIGHT 1 — but this problem is easily outweighed by the brilliant colours and superb picture. No dot crawl, just good pictures. I'd recommend it to everyone.

By the way, on a completely different topic, as a Sinclairorientated magazine, do you know how many miles the C5 does to a packet of Persil? The Doppel-Ganger, Dodworth, Barnsley

Thanks for your comments on Adapt's excellent interface. If anyone out there wants to get hold of Adapt and find out more details, then give 'em a buzz on 01-504 2840. Oh, and I believe the C5 runs better on Bold 3, unless, of course, you're talking about the New Formula Persil Automatic... Troubleshootin' Pete.

TROOFFORM LTD Business Software

Are you taking your Spectrum seriously?

The Transform Keyboard transforms your Spectrum into a fully operational professional machine.

- Will incorporate micro-drive interface and power supply
- · 60 keys including fullsize space bar
- Large ENTER key
- Full stop, comma, semi-colon, colon, single delete and edit keys
- · On/off switch with LED
- Easy installation no soldering required
- · Black anodised case
- Now with 3 colour printed key tops
- · EMODE key

"Its price of £69.95 reflects the kind of use to which it will be put but it is certainly the top keyboard at the moment."

SINCLAIR USER JUNE 1984

Business Software

Business Bank Account £10.75

This program will enable you to enter debits under 17 different subheadings. Statements include totals of all subheadings.

Sales Day Book £10.75

For all your invoices, this program will enable you to prepare statements of outstanding invoices. Program will also calculate VAT.

Purchase Day Book £10.75

Keeps a complete record of all your purchases under 17 different subheadings. This program also calculates VAT.

Business Pack £25.00

Including all the above programs.

Stock Control £10.75

Handles 900 lines, including details of supplier. Program has full search facilities enabling you to search and update all lines from one supplier.

Invoicing £15.00

This program will print out invoices, calculates discounts and VAT. The program will calculate totals from unit prices. Up to 50 accounts with 250 outstanding invoices.

Word Processing by Tasman £13.90

Tasword Two is a powerful word processing program that will perform all the functions available on large processors. The program will give you 64 characters per line on screen.

Masterfile by Campbell Systems £15.00

This is one of the best database programs available for the ZX Spectrum. This program has many uses in a small business.

Dlan by Campbell Systems £7.95

Use your Spectrum to sell your products. Dlan will display messages in up to 11 different typefaces. Will scroll text in any direction.

64 Column Generator by Tasman £5.50

You can use this program within your other programs to display 64 columns on screen.

Payroll by Byte One £19.95

This payroll program will handle up to 40 employees and will calculate NIC, PAYE, super-annuation and many other deductions. This is a very user friendly program and extremely good value.

NEW

Sales/Purchase Ledger Invoicing £25.00

This program is for use on micro-drive only. The program will print an invoice using a built-in price list and post the invoice to your customer's account. Will also print price lists, statements, labels etc.

Tasmerge £10.95

Allows you to transfer data from Masterfile into Tasword enabling you to use Tasword for mail merge. The program allows you to specify line and column of each field. For use on micro-drive only.

Superfile £14.95

This is a new database program that stores pages of text 64 columns x 22 rows. The program includes word processing and full search facilities.

Omnicalc 2 £14.95

This is the long-awaited micro-drive version of omnicalc complete with histograms and many other features.

Projector 1 £13.90

Business graphics program that will help you present your cashflow, sales expenditure in many different ways including pie line, and histogram charts.

Tasprint £9.90

Use this program with Tasword Two to produce 5 different fonts on a dot matrix printer.

MF-Print £6.95

Enables you to set a print format for your full-size printer within masterfile. Supplied complete with masterfile for £19.95.

Trans Express £9.95

Micro-drive utility program which will enable you to backup all your micro-drive cartridges.

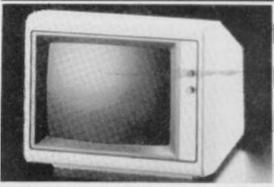

Now in stock

QL

Centronics Interface	£39.95
QL Dust Cover	£5.00

Transform can supply a wide range of printers, monitors, and leads for the QL. For further details send S.A.E.

Monitors

It is possible to connect your Spectrum to both Black/Green and composite Video monitors using high resolution monitors are particularly useful with programs like Tasword that use 64 columns. We supply complete instructions on how to connect monitors to both Issue Two and Issue Three Spectrums. These monitors can also be connected to your QL.

Printers

All the software we supply runs on full-size printers (unless you are using interface 1) you will require an interface to connect your Spectrum to a printer, the interface we supply uses the graphics characters to set printer codes as in Tasword and prints a double size screen dump.

Centronics/RS232 Interface £45.00

Dot matrix printers

 Smith-Corona TP I
 £189.00

 Silver Reed EXP500
 £284.00

 Brother HR15
 £349.44

Please add £5.00 delivery plus VAT to the price of printers and monitors. All software prices include VAT, post and packing.

TRANSFORM LTD. (Dept.YS) 01-658-635 24 West Oak, Beckenham, Kent BR3 2EZ

VISA

Card games written in Basic suffer from very slow graphics onscreen ... but if machine code's not your speciality, what do you do? Relax — the answer's here! Machine code magician, Toni Baker presents an amazing program to draw playing cards anywhere on-screen — just like that!

You'll need a Hex loader (of which there have been many published in previous issues of YS) — or better still, a monitor program — to type this lot in. Note that the data Hex code starts at 8000 Hex, and is followed immediately by the main program code (on page 23) at location 8C40 Hex. (Please note that the main program code requires you to type in the middle column only — the last column provides the source code for those using an assembler; both listings show the current address in the first column.) Make sure that you clear space in memory above 8000 Hex,

81F06B6B17FEEA09013FF60D7F0B03B9F1330F9F03D0FFB0514A07F0B0A1557F94EF95F 835FFF073A88A1FFFA055F5F7DD187810070E11803F05F50DD8DCC44CFC0F80FD79801353F6EE 831FFF0F3AEA8FFE94F925FFBE0F710C0C07118C3C03F605E8871800080171F033773998BF95C 8730240FF120247FF2410CE25F3FF7DF7300F0853800FF71FE38800FFF801BBBFFF7722001A48F04F9 8730240712DF947E673EEBFA77730FF0C520F00FB7F1C3F000FFF001B00F7FEF11BA94F9F7 8008 8010 8018 8020 8028 8038 8040 8048 8050 8058 8058 8068 8070 8078 BFC18F78A12E742E753F3AEAF1800171170F0F93E1F89F9FFF81820083F0977FFC004 8088 8090 8098 80A0 80B0 80B8 80C0 80C8 80C0 80C8 BOEG

Announcing the most amazing, stupendous, phenomenally fab (That's enough superlatives! Ed.) program, designed to take your mind off into the land of playing cards. It's a neat little slab of machine code (well, quite a long piece really) which enables you to actually print pictures of playing cards on-screen. But the really cunning bit is that you can write your own card games program in Basic while letting my machine code get on with the hard work of drawing it.

PICTURE THAT!

The nice thing about this program is that once you've entered it into the Spectrum, all you have to do to call a deal up onscreen is to use a single line of Basic like this:

PRINT USR CARD, y co-ordinate, x co-ordinate, card-number, suit

And that's it! When the Spectrum tries to

8478 8480 8488 8490 8498 8498 8480 9F6028705589BFFFF59F307088F0FE984F92FBF77FFF963CC1FF3100A88F71C3EE007AC833FFF881 BF8455CFB61BF60 LBBC1EF777FDF99FFFBF8B3CC1807CFC9C9C7FFFFD7FBBF8457FE839E07FF3FFFEB6417BC1B9F0A0FC1D8 BF87533D2033F01DDA4E7CF99FFBF830E10010B1BDCBCF79FFF9BF25FFF901223FD97FFFED412460DF0A00B 861ABB25571005BD84100ADEFFCE6015AB017701BD7AFFC24FA1C075AB017032CFC07FCCB07FFCBD 801F00553DC31D7D65DF5000A600DC01F11110B801FFF95B83EFF8C2800C1100BE6149F7CF21FEB7FEB80FFFESF

execute it, nothing will be PRINTed onscreen except for the desired card ... and that can appear anywhere you want (hence the need for x and y co-ordinates — as in the PRINT AT command). Note that printing cards does not in any way affect the normal PRINT position.

Actually, the program will allow a few variations on this theme. For example, if you make the 'card-number, suit' value equal to '0,0', you'll get a playing card face down printed up on-screen; try '0,1' and '0,2' if you want to see a red and black Joker card, respectively.

Apart from the above paragraph, you select cards to be printed on-screen as you'd expect — card-number '1' represents an ace, '2' a two, and so on, up to '13' for a King. The numbers representing the various suits are '1' for diamonds, '2' for clubs, '3' for hearts and '4' for spades. S'easy really!

For those who know anything about

machine code (the ignorant hoards can ignore this paragraph), the program is actually a wee bit clever (preen, preen). That's because all those other numbers (which can, in fact, be variable names or expressions like 'X+1') after the word PRINT are not actually PRINTed quite fortunate really because you wouldn't exactly get ecstatic over a load of silly numbers cluttering up the screen. The reasons they're ignored by normal Basic are: firstly, because the machine code routine begins with a load of POPs which have the effect of making the poor ol' Speccy 'forget' what it's supposed to do after the word PRINT (but you do have to have exactly the right number or else it freaks out); and secondly, the system variable CH_ADD is adjusted so that it points to the end of the statement allowing the next statement to be carried out without any hassle. The program allows a couple of ROM routines to

move CH_ADD and evaluate the experience at the same time.

The syntax of the card printing statement has to be exactly as I've specified. It can be a real turn-off if you get it wrong because a line which has, for example, the suit number out of range—or too many items after the word USR—can still be entered into a Basic program. You won't find out if it's wrong until you try to run it.

The only other point worth mentioning (which is actually quite important!) is that any program using the routine must have somewhere at the start of the listing, the line:

LET CARD= 36102

The cards printed are eight character squares across and ten characters squares down — so you can print them anywhere on-screen that's handy!

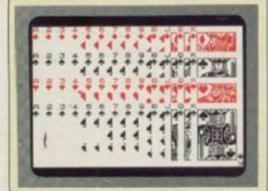

Have fun with the routine. As I keep

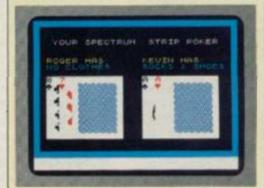

BBFB 08 3E 90 3D 98 3D A0 3D BC00 A8 3D B0 3D BB 3D C0 3D BC08 C9 3D E0 BB 50 3E BB 3E BC10 58 3E 43 23 63 23 43 63 BC18 21 25 61 65 21 25 43 61 BC20 65 21 25 41 45 61 65 21 BC28 25 33 41 45 61 65 21 25 BC30 33 41 45 53 61 65 11 15 BC38 31 35 43 51 55 71 75 11 BC40 15 23 31 35 51 55 63 71 BC48 75 03 84 48 DF FE 2C C2

GRAND SLAM

The Basic program given here provides a quick demonstration of the routine at work. You can, by the way, slow down the process by adding a 'PAUSE 25' statement somewhere between lines 60 and 80.

1 LET CARD = 36102 10 PAPER 0 20 INK 7 30 BORDER 0 40 CLS 50 FOR S = 1 TO 4 60 FOR N = 1 TO 13 70 PRINT USR CARD, 4*S-4, 2*N-2, N, S 80 NEXT N 90 NEXT S

The top demonstration screen shows the Basic listing given in action. The second screen shows a typical application. (Hah! Ed.)

New-the official Spectrum Upgrade! Turn your Spectrum into a Spectrum + for just £20

Whichever you decide on, you'll also receive the new 80-page User Guide and Companion Cassette.

for £30 we'll upgrade it for you

The bigger, better Spectrum keyboard

The Spectrum + measures 12½" x 6." It has a large typewriter-style keyboard, with hard, moulded keys.

You'll find the new keyboard has a smooth, positive action – ideal for touch-typing word processing, simulation programs, and extended programming sessions. Two retractable legs give a perfect typing position.

There are 58 keys in all, including 17 new keys. Programmers will be pleased to see dedicated punctuation keys, a space bar, and separate shift keys for graphics and extended modes. And a reset button allows you to clear a program from your computer's memory without disconnecting the power supply.

The official Spectrum Upgrade Naturally your upgraded computer

will accept all the peripherals in your Sinclair system-Interface 1, Microdrives and so on-as well as all The new User Guide has over 80 pages of information, including a handy BASIC dictionary. The Companion Cassette provides an interactive tour of the new keyboard, and includes three entertaining arcade games.

TO ORDER BY MAIL:

When ordering the Upgrade
Service, send off your 48K
Spectrum to the address below,
carefully wrapped, together with
the completed coupon and appropriate payment. (Please do not
return the mains adaptor, manual
or other ancillaries.) Your upgraded
computer will be despatched to you
within 10 days of receiving your order.

When ordering the Upgrade Kit, simply complete the coupon, endosing the appropriate payment and post it to us at the address below. Please allow up to 28 days for delivery.

BY PHONE: Access or Barclaycard holders can call Camberley (0276) 685311 for personal attention, 9am to 5pm Monday to Friday. Only the Upgrade Kits can be ordered by phone.

Please note: the upgrade offer applies to working 48K Spectrum models in the UK only.

BIG DEA!

saying, don't panic just because it's all been done in machine code. If you're not too sure how to call the routine from Basic in your own program, have a look at the example listing I've given with this article. I look forward to hearing what you've managed to do with it in future Forum columns. Bye for now!

SOMEWHERE DEEP INSIDE YOUR SPECTRUM IS AN ARTIFICIAL INTELLIGENCE TRYING TO GET OUT...

You will be able to access the 'brain' of your computer with programs which learn and reason, or those which will talk to you, obey you and advise you.

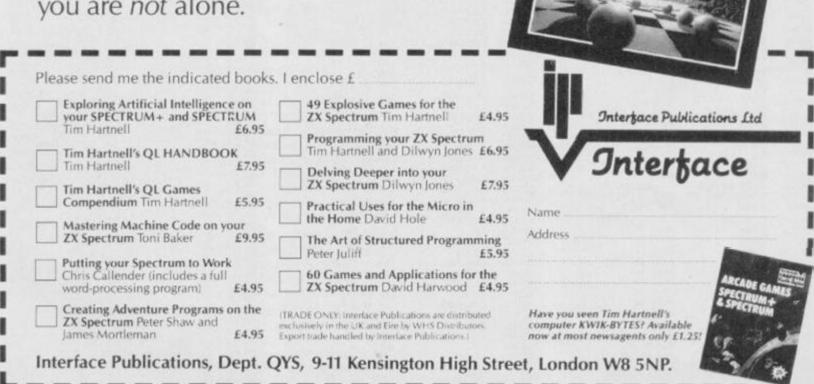

This book will guide you into the fascinating world of Artificial Intelligence . . . where science fact interacts with

science fiction.

Can a machine really think?
What is the nature of intelligence?
Will a machine ever be built to
harness that nature?

Deep inside your Spectrum . . . and deep inside this book are the answers and programs that explain and demonstrate.

Be careful though — remember when you load up your computer . . . you are *not* alone.

After a hard day's night with Heroes of Karn and Curse Of The Seven Faces, Clive Gifford dials the YSAdventure Helpline for the lastest tricks 'n' tactics.

Well, whenever I can actually get through on the Adventure Helpline to chat to our Master adventurers (it's that busy!), it seems they've received calls from all over Europe! They've even had the odd call from frustrated adventurers working on oil rigs in the North Sea.

First, off, let's hear from Rich Filfghbert in Sweden. He can't work out how to get skiing in Valkyrie 17. OK, Rich, it's like this — type in 'READ BOOK, WEAR SKIS' and make sure you've got those ski poles handy, and away you go! Don't break a leg, Rich!

Another problem that's cropped up in Valkyrie 17 is how and where to obtain money. Well, for a start, you could always naff off down to the village and pawn that necklace that's lying around!

There are a few adventures that I'd have expected to create floods of frustrated callers — namely, The Hulk and Hampstead. Needless to say, you're being very quiet on both of these — which means you've finished them already (Not a hope! Ed.) or you're still trying to crack them. In the event of the latter, here's some advice. Type 'GO DOOR' in The Hulk and you'll get out of the Chief Examiner's Room. and all you have to do to find the credit card in Hampstead, is sit and wait on the bench on Hampstead Heath. That'll do nicely!

Level 9 adventures seem to keep most of the adventuring nation awake at nights. Dave Deals of Sunderland can't get the can of paint through the air-lock. Aha, Snowball, I hear you say. Well, the answer is to put the can into the tool-box

and carry on as normal. Another problem with this adventure game came from Mr Tam of Wallasy who wanted to know how to use the screen. Try wearing your visor, Mr Tam!

Another well regarded Level 9 game, Lords Of Time, prompted two questions from Sam Whittaker of Twickenham. So, Sam, you can leave the Invention Room by saying 'James Watt' and you can open the door on Zone nine by dropping 'Hope' (the milestone).

There was also an anonymous caller who couldn't climb the broken ladder in Phipp's Colditz. Hmm, not an easy one this — but try asking the prisoner to lift you up after you've fed him and you should do alright.

On the several adventures set in the 'classic quest style. Artic's Eye Of Bain hasn't attracted quite the interest it deserves, but we did have a question from Richard Ellis of London. He's having trouble freeing himself from the strong pole in the hut near the start of the adventure. Oh boy, Richard! Try lifting the pole ... and do call again if you've got any more problems.

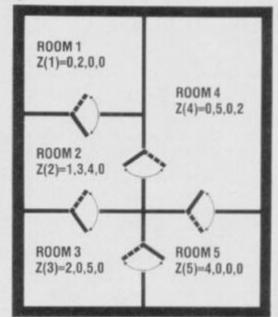

In Adventure Quest, a number of people have confessed that they're having difficulties sorting out what to do with the egg. Obscene suggestions aside, try going South from the Glowing Coals and depositing the egg in the nest.

ROUTINE ADVENTURES

The hallowed halls of Castle Rathbone echo to the sounds of Green Goblin Peter Shaw, piecing together another in a series of adventure subroutines.

A simple room plan, here to flex your adventure programming.

This month, I'm going to be looking more at the structure of an adventure — and the result is not really a routine, more a concept that you should bear in mind once you get the programming itch!

When you're got a rough idea of what you want the room layout to look like in your adventure, you can start allocating variables; in the example we'll be looking at here, array Z() is used to represent the various locations.

The diagram shows the aeriel view of a very simple adventure — you'll not find any unfriendly dragons to kill — there are just five rooms, and that's it! Now, getting back to the array Z(), our task is to dimension it so that we can store all the necessary details. Say we dimension the array:

DIM Z(5,4)

This gives us five by four elements in the array Z() to fill. Bearing in mind the formula Z(N, S, E, W) — where 'N', 'S', 'E' and 'W' indicate North, South, East and

'VENTURING OUT...

HEROES OF KARN Interceptor Software £5.50

In great contrast Imperial Software's Curse Of The Seven Faces (the other adventure reviewed here), this game is a highly professional affair, even though it's a straight conversion from an original adventure on the Commodore 64.

The scenario isn't particularly original or even interesting, but the story on the back cover of the cassette is told with such flair that all but the most hardened adventurers will sit up and take notice! I won't go into all the sordid details, save to say that it involves you saving a kingdom from the shadow of evil. The usual stuff!

On starting the adventure, you're greeted with a splendid picture; in fact many of the locations have accompanying graphics that appear instantly and add greatly to the whole atmosphere. However, the descriptions are often too short, particularly where there's no picture to feast your eyes on.

Despite fancy graphics and a few other innovations, an adventure stands or falls by the strength of its puzzles, and the flexibility and quality of response to your, hopefully, imaginative commands. Heroes Of Karn is a definite success in this context. The responses are varied and entertaining, and the puzzles are tricky and, in some cases, rather obscure! For example, I eventually managed to get past the Barrowright by attacking it with a Bible — which didn't seem the most reverant thing to do at the time!

Interceptor's Heroes Of Karn — a puzzling adventure that's destined to become a classic?

Although Heroes Of Karn supports a few commands five or six words long, it's predominantly a standard adventure. However, I'd recommend it to anyone fancying a crack at a 'classic', especially if you've got a few long evenings to spare while you try and solve it!

CURSE OF THE SEVEN FACES Imperial Software/£8.95

As the software industry becomes dominated by the larger houses, many adventurers welcome releases from individuals and the like. Often the 'smaller' releases can be much more original and thoughtful than products churned out by 'big boys'. Sad to say, this isn't the case with *Curse of The Seven Faces*.

The cassette comes with a photocopied inlay card which is just fine! OK, it's not flashy paper, but who cares? But someone could have corrected some of the spelling mistakes — I mean to say, someone's even mispelt the name of the game! Anyway that said, you begin your life as a 'poor pesant', which I suppose is a humble version of a 'peasant'. I don't mean to go on about the spelling and grammatical errors, but they're there in every location. Believe me, it's difficult to get into the atmosfere I mean atmos-

pher ... er ... atmosphere! (See what happens when you play too many adventures, Clive? Ed.)

The actual story line is pretty unoriginal — you've got to rescue a number of magical items (wands, cloaks and so on) from the forces of evil. Much of the adventure's quite playable, with some reasonable if uninspiring puzzles. However, the error-trapping is very poor. Good adventures should have a number of responses to wrong commands — some to aid the adventurer and others to entertain; needless to say, this adventure fails at both!

Once you've read 'You Cannot Do That' and 'Nothing Exciting Happens' for the umpteenth time in a row, you begin to believe it — nothing ever exciting happens! Of course, you can have some limited fun with this kind of programming — I typed in some commands ordering a hero of the piece to cat a slab of rock! And guess what was flashed up

A perfect example of a bad adventure. 'Nothing Exciting Happens'!

on the screen — yes, you've guessed it — 'Nothing Exciting Happens'. Try it yourself sometime ... and see if anything exciting happens to you!

But whether you decide to chew rocks or not, it's bound to be more exciting than this collection of bytes. One to be avoided ...

West respectively — you should begin to understand the numbers I've included on the map alongside each room. For example, take a look at Room 2 — it has an exit North, South and East, so its part of Z() would look like this:

Z(2) 1234 2 1340

This indicates that from Room 2 you can go North to Room 1, South to Room 3 and East to Room 4; a zero element in the West indicates that there's no exit in that direction. Geddit? So, once you've filled the Z() array with all the data necessary for the computer to understand your map, you're ready to move around. OK, imagine you're in Room 2 and you're contemplating moving West—let's assume for this example that mS holds the command you've just typed in, and the variable 'p' is the room you're currently standing in—a line of programming would probably look something like:

IF m\$="WEST" AND Z(p,4)=0 THEN PRINT "THERE IS NO EXIT WEST"

Of course, not all maps will look like ours so you'll also need a line like:

IF mS="WEST" AND Z (p,4) <> 0 THEN LET p=Z(p,4)

This will see if there's is an exit to the West and, if there is, the program sets the value of 'p' to the same value held in Z(p,4).

Next month I'll be looking at a short program combining all that we've covered so far in adventure programming.

HIRE SPECTRUM SOFTWARE

OVER 280 different tapes for hire including ARCADE, ADVENTURE, BUS-INESS, EDUCATIONAL, etc.—even an m/c Compiler. FREE 26 page catalogue FREE newsletter, with hints, tips and our top tape chart.

OVER 3000 tapes in stock, with up to 60 copies of each title for fast service. All tapes sent by 1st class post.

LOWEST PRICES – hire up to 3 tapes at a time, from 63p each for two weeks hire. (Plus p&p and VAT). European members welcome.

Tapes for sale at DISCOUNT prices. Telephone 01-661 9240 (9am - 5pm) or write for further details, or complete the coupon and JOIN TODAY – you've nothing to lose!

SAVE £3.00!!

For a limited period, we are offering HALF-PRICE membership to readers of this magazine. Join now, LIFE membership is only \$23.00 (normally \$6.00)

SWOP SHOP

A new service from N.S.L. **SWOP** your unwanted tapes with tapes from other members for a small handling charge of only 60p (plus p&p and VAT)

COMPLETE MUSIC SYSTEM

FOR THE ZX SPECTRUM

MUSIC TYPEWRITER gives you all facilities needed for music making Using a special keyboard overlay it turns Spectrum into timulated music keyboard and enables you to write, edit, play & store music. Music is shown at played in STANDARD NOTATION and can be capied to a printer [see example above). MUSIC TYPEWRITER is easy to use even, without any music knowledge and is an ideal educational tool for learning music. It's turn to play with for music novices and yet offers a late ven to professional musicana (like full framposing).

It has up to 16 compositions, 6 octove range; treble & bass cleft; how stoffs on screen; most time signatures & note values including dothed notes & tripleth; staccards, tending many automated features like italls direction, bar length; use of accidentals; error mapping; an screen instructions, eight page manual, overlay and much more.

Please send me a copy of MUSIC TYPEWRITER at £ 9.95 each y.s.

TEGADEMO

1985 is the year of YS MegaBasic! And here for your delectation is a demonstration of its capabilities, courtesy of YS MegaBasic author, Mike Leaman.

What we have for you this month is a small demonstration listing for users of YS MegaBasic to test-drive their newfound Basic. Virtually each line of the listing has been described in detail so that you don't miss out on a single byte!

If you check out the screen shots given and read through the listing, you'll see that short though this program is, it'll provide you with first-hand experience of the various character fonts, sizes and stippled characters available, QL-style windows, named procedures, sound effects and a whole lot more! Of course, when you type it in you'll be able to sort out how the MegaSpectrum keyboard operates as well!

If you haven't yet succumbed to the lure of YS MegaBasic, then this program isn't going to put you off! Try writing the same program in ZX Basic and see how many lines of program you'll need...

Over the next few months, we'll be providing the odd demonstration listing for you to ogle over. Next month, for instance, we'll be showing you how you can create 3D graphics a la Knightlore in just a few simple lines of YS MegaBasic!

But that doesn't mean we don't want to see your own programs. Send your listings to the YS Towerblock and we'll get Mike Leaman to have a look at them (And we'll be publishing the best of 'em! Ed.). Also, if you're having any problems, write to Mike and he'll try and reply to most of them within the pages of Your Spectrum. Of course, if you've got a major disaster on your hands and you want help instantly, try phoning Troubleshootin' Pete on 01-636 2416 — he's only had his copy for a few weeks but he'll try and help you!

Anyway, back to you! Until YS MegaBasic is the only Basic on the Spectrum, Your Spectrum's going to be one of the only places you can get your programs published and get some help on its mastery. So, keep watching these pages! And if you haven't yet joined the thousands of YS MegaBasic users ... what are you waiting for?

THE CURSE OF THINGS ZX!

It had to happen! Our plans to have YS MegaBasic ready for public consumption by January 1st, 1985, were scotched at every turn. Here at YS, we'd like to apologise to all who received YS MegaBasic a few days late — thanks for having patience with us and we hope you thought the wait worthwhile! Needless to say, all deliveries of YS MegaBasic are now under control. Of course, there won't be this trouble next time ...

16 PCLEAR

Line 16 Clears the PROCedure stack. You must do this at the beginning of any program that uses procedures or "REPEAT-UNTIL" loops.

17 REPEAT

Line 17 Marks the beginning of the main program loop. (This 'REPEAT-UNTIL' loop makes the demonstration repeat itself.)

20 INTRO

Line 20 Calls the "introduction" procedure.

30 WINDOWS

Line 30 Calls the 'windows' procedure.

40 GRAPHICS

Line 40 Calls the 'graphics' procedure.

50 END

Line 50 The 'end' procedure. This produces a scrolling 'end' message once the demonstration program's finished.

60 UNTIL_0

Line 60 Makes the demonstration repeat forever! This is equivalent to the more common "REPEAT-UNTIL FALSE" loop you'll find in other Basics.

1000 BINTRO

Line 1000 Defines the beginning of the 'intro' procedure.

1003 MQDE_4: CLS

Line 1003 Selects large size characters and clears the screen.

1005 WINDOW_0,0,24,64

Line 1005 Defines the current window so that it covers the

1010 BRIGHT O: PAPER O: MODE_4

Line 1010 Sets the start-up colours for the Introprocedure.

1020 FOR F=0 TO 2 1025 FONT_F: RESTORE 1999

Making use of all the available character fonts and stipples, the demo's title screen includes musical accompaniment from YS MegaBasic's 'SOUND' and 'PLAY' commands. This part of the program is displayed in Mode 4, where each character is 16 by 16 pixels; there's also good use of the 'STIPPLE' command.

```
1050 FOR I=1 TO 7
1060 INK I
1070 PRINT CHR$ 3;" Y8 MEGA
BAS &C "; CHR$ 4; "DEMG "
1075 SREP_1:SOUND_0,0,1,2+2*F,25
5:SON
1080 VDU_2,13,4
1090 NEXT I
1095 IF (8=6) AND (I=8) AND (F=2)
) THEN GO TO 1110
1100 CLW_3
1110 NEXT B
1120 NEXT F

Lines 1020-1120 This loop prints 'YS MEGABASIC DEMO"
```

1030 FOR S=1 TO 6 1040 READ Z:STIPPLE_Z

Lines 1020-1120 This loop prints 'YS MEGABASIC DEMO' on-screen in seven different colours, three different fonts and six different stipples. Line 1070 shows how you can print different size characters with the same PRINT statement, character codes 3 and 4 change the size of character output. Line 1080 produces a single-line feed, instead of a double-line feed. Line 1100 homes the cursor, but does not clear the window. Line 1075 produces a continuous sound effect.

1130 PRINT AT 21,0; CHR# 3;" by Mike Leeman 1985";

Line 1130 Prints a message at the bottom of the screen in double-height characters, using control codes in the PRINT statement

1140 PAUSE 100:SOFF:PLAY_0,5,0,3

Line 1148 Switches off the Interrupt Sound Generator (ISG) and produces another kind of sound effect using the 'PLAY' command.

1145 PRINT AT 21,0; PAPER 1; OVE R 1; "

Line 1145 Colours the bottom two lines of the display to

1150 CURRENT_4:WINDOW_21,0,2,28 1160 CURRENT_5:WINDOW_21,28,2,36

Lines 1150-1160 Set up two windows over the blue strip at the bottom of the screen.

1170 FOR A=1 TO 80 1180 CURRENT_4:PAN_0.-2 1190 CURRENT_5:PAN_0.2 1200 NEXT A

Lines 1170-1200 Split the blue strip in half by PANning in two different directions.

1204 INPUT |

Line 1204 Sets the colour of the two input lines at the bottom of the screen.

1205 FOR A=1 TO 5 1210 FOR P=1 TO 7 1220 CHANGE_56,8*P 1230 PLAY_1,20,0,20,5*P 1240 NEXT P 1250 NEXT A

Lines 1205-1250 This routine makes the display flash in eight different colours, by switching the PAPER colour

You can have up to ten windows onscreen at any one time, all of which can be controlled independently through simple YS MegaBasic commands. At this stage of the demo, four windows have been created and YS MegaBasic is scrolling each of them, pixel by pixel, in different directions via the 'PAN' command. using the 'CHANGE' command. Note the use of the 'PLAY' command to produce another stunning sound effect.

1260 ENDPROC_INTRO

Line 1260 Marks the end of the 'introduction' procedure.

1999 DATA 1,3,5,6,14,15

Line 1999 Contains the numbers to define the six different stipples required.

2000 @WINDOWS 2010 CLS

Lines 2000-2010 Mark the beginning of the 'windows' procedure. Line 2010 clears the screen.

2020 CURRENT_2:WINDOW_0,0,5,64: PAPER 1: INK 7:MODE_2:CLW_0 2030 PRINT "YS MegaBasic can ope rate upto 10windows at once , each windowcan have its own character size ."

Lines 2020-2030 Define a small window at the top of the screen and print a message in it.

2040 CURRENT_4: WINDOW_5,0,8,40:M GDE_3 2050 CURRENT_5: WINDOW_5,40,8,24: MODE_2 2060 CURRENT_6: WINDOW_13,0,8,64: MODE_4: STIPPLE_15

Lines 2040-2060 Set up three different windows in different parts of the screen, all with different character sizes.

2070 FOR A=1 TO 150 2080 FOR W=4 TO 6 2085 CURRENT_W 2090 INK RND=7: PAPER 9 2100 VDU_(128+RND=15) 2105 IF A=150 THEN CLW_3 2110 NEXT W 2120 NEXT A

Lines 2070-2120 Print 150 different random characters to the three different windows in random colours.

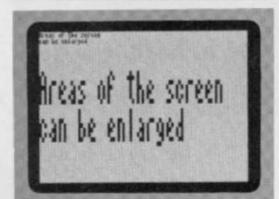

2130 FOR A=1 TO 100 2140 CURRENT_2; SCROLL_0,-1 2150 CURRENT_4; PAN_0,-2 2160 CURRENT_5; PAN_0,1 2170 CURRENT_6; SCROLL_0,1 2180 NEXT A

Lines 2130-2180 Scroll the four different windows onscreen, all in different directions.

2190 WINDOW_0,0,22,64: BORDER 1: INPUT j: PAPER 6: INK 1:CLW_0 2230 PRINT AT 1,2;CHR\$ 1;" Windo ws can be PANned and"'" SCROLLe d in all directions"

Lines 2190-2230 Print a message in the top left-hand corner of the screen using Mode 1 size characters.

2240 PLOT 4,171: DRAW 112,0: DRAW 0,-24 2250 DRAW -112,0: DRAW 0,24

A major feature of YS MegaBasic is its ability to 'grab' a portion of the screen and place it elsewhere. Then, using the 'SPUT' command, you can enlarge the portion of the screen when it's reprinted. It's worth noting that all attribute values are retained when you're using 'GET', 'PUT' and 'SPUT'.

Lines 2240-2250 Draw a frame around the message in the top left-hand corner of the screen.

2260 PAN_0,120:SCROLL_0,-120 2270 FOR Z=1 TO 127:PAN_0,-1:SCR OLL_0,1: NEXT Z 2290 PAUSE 50: CLS

Lines 2260-2290 PAN and SCROLL the message around the screen, pixel by pixel. Line 2290 pauses program flow for a second and then clears the screen.

2300 ENDPROC_WINDOWS

Line 2308 Marks the end of the 'windows' procedure.

3000 @GRAPHICS

Line 3000 Marks the beginning of the 'graphics' procedure.

3010 BORDER 7: PAPER 7: INK 1:CL W_0

Line 3010 Sets the white screen and clears it.

3020 PRINT CHR* 2; "Graphics can be drawn on screen and displayed instantly by the command CHANG E."

Line 3026 Prints a message at the top of the screen using Mode 2 characters. (Note the use of a control character in the PRINT statement to define the character size.)

3030 FOR A=1 TO 40: DRAW INK 7; (RND*255)-PEEK 23677, (RND*130)-P EEK 23678: NEXT A

Line 3030 Draws 40 random lines on the screen (in the shape of a 'bird's nest').

3040 CHANGE_7,2 3050 PAUBE 50

Line 3040-3050 This routine makes sure that the screen is covered in red INK. Line 3050 pauses program flow for a second.

3055 FOR Z=1 TO 8 STEP 8 3060 FOR N=1 TO 5 3070 FOR I=0 TO 7 3080 CHANGE_7*Z,I*Z 3090 PAUSE 10 3100 NEXT I 3110 NEXT N 3120 NEXT Z

Lines 3055-3120 FLASH the INK colours on-screen followed by the PAPER colours.

3130 PUT_2,0,0,0,22,32:FADE_0

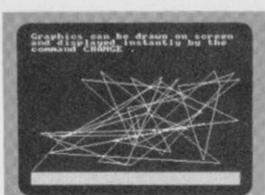

Line 3130 Pats the contents of the ROM on to the screen and FADEs the display file to zero (black PAPER and black INK).

3140 PUT_2,0,0,0,22,32:FADE_6

Line 3140 Puts the contents of the ROM on-screen and FADEs to green INK and black PAPER.

3150 PAUSE 50: CLEAR 39999

Line 3150 Clears some space in RAM to store part of the screen.

The 'CHANGE' command allows you to change the attributes on-screen. But here, in this section of the demonstration program, we're looking at the 'FADE' command, which lets the user create stunning explosion effects by manipulating the attributes.

3155 WINDOW_0,0,2,20

Line 3155 Defines a small window in the top left-hand corner of the screen.

3160 PRINT CHR\$ 1; "Areas of the screen" "can be enlarged";

Line 3160 Prints a message in the window using 64 column characters.

3170 FOR A=1 TO 201 PAPER RND+7: INK 9:CLN_3: PAUSE 10: NEXT A

Line 3170 Highlights the window by FLASHing the PAPER colours.

3190 GET_0,40000,0,0,2,10

Line 3190 Stores the contents of the window into memory

3200 SPUT_40000,0,50,3,6,10,16 3210 PAUSE 50: CLS

Lines 3200-3210 Place the window and its enclosed message back on-screen, enlarged three times in the x direction and six times in the y direction. Line 3210 pauses program flow for a second and clears the screen.

3220 ENDPROC BRAPHICS

Line 3220 Marks the end of the 'graphics' procedure.

4000 @END

Line 4000 Marks the beginning of the 'end' procedure.

4005 INK 2 4007 CLS

Lines 4005-4007 Set the screen to red INK and clear it.

4010 SPRINT_0,0,4,5,"THE END"

Line 4010 Prints a message at the top of the screen in large letters.

4020 CURRENT_2:WINDOW_0,0,22,64 4040 CURRENT_4:WINDOW_5,0,17,64

Lines 4020-4040 Set up two overlapping windows.

4050 FOR Z=1 TO 50 4060 CURRENT_2:SCROLL_0,-1 4070 CURRENT_4:PAN_0,1 4080 NEXT Z

Lines 4050-4080 This routine scrolls the message downwards into the second window, which then scrolls the message sideways — this gives the slanting effect.

4085 PAN_0,-10 4090 PAUBE 100

Line 4085-4090 Scroll the message to the left by ten pixels to square it up on-screen. Line 4090 pauses program flow for two seconds.

4100 ENDPROC_END 9999 PAUSE 0

Line 4100 Marks the end of the 'end' procedure.

The closing screen of MegaDemo uses the large character size mode, as well as the 'PAN' and 'SCROLL' commands to make the letters lean to the left. The entire demo program has been written using structured procedures — which means that this whole routine was called using the procedure command, 'END'.

WITH THE NEW AND UNIQUE DUO IN JOYSTICK INTERFACING

- IN-31 (Kempston Protocol) for maximum games compatibility.
- Built-In Option Rapid/Auto Fire with any "ATARI" type Joystick.
- Reset button for re-starts without the need to pull out the power lead

- Simple to program
- No software required.
- 1k On-board Memory.
- Up to 8 programmable positions plus fire
- Four light emitting diodes (LEDs) to aid programming
- Reset button for restarts without the need to pull out the power lead.
- Can be re-programmed at any time.

- □ Interstate Pro(s) at £22.95 □ Interstate 31(s) at £11.95

FRENCH, GERMAN & SPANISH

FOR BBC(32K) · ELECTRON SPECTRUM (48K)

As used in numerous schools and colleges these programs provide a highly successful aid to modern language learning. Each cassette contains a sophisticated control program and a comprehensive series of vocabulary lessons which can be used in a variety of self-paced learning and lest modes. Words phrases etc are displayed with all necessary accents and special characters, different colours are used for masculine feminine and neuter words to assist gender learning.

The programs are suitable for beginners 0-level and beyond as simple commands enable new lessons in vocabularly or grammat to be created by the user leaded as required, then permanently saved for later use Invaluable for homework and exam revision!

I'wo cassettes are available for each language together these contain a vocabulary of thousands of words. Level A provides 16 lessons in general subjects, Level B provides a further 16 lessons including adjectives adverbs and fully conjugated verb lists.

HERORIUS HERORIUS

Investing in a Microdrive is a relatively easy process — using it is another matter entirely! AJ Unwin offers tricks and tips on how to get around a number of seemingly insurmountable hassles experienced by Microdrive users.

Hands up all those of you who are disillusioned with their Microdrives. The promises of faster access times and reliable storage are often not enough to encourage investment, and the expected support from the major software houses has proved non-existent.

However, Spectrum owners are well used to having to make do with what's available — and, to tell the truth, the Microdrive isn't a bad piece of kit at all ... you just have to know what you're doing!

FIRST THINGS FIRST

Our first task here is to gain some insight into the complications of shifting commercial and home-grown software from slow-loading cassette, across to the faster access Microdrives. Commercial programs available for the job are not too well reckoned and, in fact, claims of a 60 per cent success rate may be a little high—especially when you consider that most

of the commercial attempts use a low RAMtop address in the programs, and any CLEAR statement with a number below 23610 makes it nearly impossible to use any Microdrive function at all!

Later on in this article, we'll be looking at a few of the shortcomings of the Microdrive itself and investigating areas that could be improved. Finally, it must be said that our thoughts here are directed towards the 48K Spectrum rather than the 16K model; most of the programs that would benefit from the Microdrive's higher access speeds are those of the longer variety. But, having said that, the 16K machine can still use most of the techniques described here.

DOUBLE TROUBLE?

There are two types of program that are particularly hard to convert for Microdrive: those that use machine code with a RAMtop too low for a Basic loader program (or even Microdrive functions); and the type of program that uses cassette-based SAVE and LOAD routines.

In general, if the code uses all the space available above RAMtop, and RAMtop is lower than 24610, then forget it! This code cannot be moved easily without resorting to machine code access of the Microdrive.

However, since most of the programs of the first type can be transferred with the help of a few tricks, that makes a good place to start. Most of the software on the market contains a Basic loader and a main section of machine code ... therefore, to be able to save the program to Microdrive, we need to know both the start and length of the code. We also need to find out the address from which to run it; look out for the 'USR xxxxx' in the Basic loader program!

The start and length of a particular program is not so easy to find, so we resort to a versatile cassette header reader like that given in this article. With these three vital pieces of information, it's a simple process to load from cassette and then save all the necessary codes to Microdrive using a line of code such as:

LOAD "" CODE: SAVE* "m";1; "name"
CODE start, length

Where 'start' and 'length' are taken from the header reader program.

A word of warning though. Some programs use the areas required by the Microdrive system itself. For instance, addresses 23734 to 23813 are used for the system when no buffers are present but, as soon as a Microdrive access is made, another 595 byte block is needed. If the command 'PRINT 23734; "to"; PEEK STKEND + PEEK (STKEND+1) * 256' gives the range which will coincide with the code, then the system could be overwritten.

However, in general, if the Microdrive block is going to be overwritten, the answer (if memory space will allow) is to load the code into a different area of memory and save it from there remembering, of course, that the loader will need to be altered accordingly to:

LOAD "" CODE start2: SAVE "
"m";1;"name" CODE start2, length

Now, all you have to do is create a loader program with the minimum information necessary to re-load the code parts.

Owners of 16K games can make use of the fact that the top 32K in the 48K machine is effectively redundant — so you can ignore the 'CLEAR 23610' statement in the loader and keep RAMtop above 32K. For this case, use a loader of the form:

10 LOAD "m";PI/PI;"name" CODE 20 RANDOMIZE USR VAL "xxxxx"

Where 'xxxxx' is the address the program starts execution from. Study this program for a minute or two and you'll see some weird looking statements in the loader. These will be explained more fully later on, but in short they're here to save memory since in most cases spare memory will be a scarce commodity indeed.

TWO UP

The second type of program is the one using the cassette LOAD/SAVE routines from within the program. With most program loaders, these LOAD/SAVEs are done from within this Basic program, with calls to the main code; therefore, there's no reason why it should be difficult to change all these to Microdrive versions. The code, however, may be sitting in a very low position and may need the area above for file data - try and keep the RAMtop as low as possible. This imposes large memory restrictions on our Basic program. If you're going to write a program that still incorporates all the original SAVE/LOADs, you'll have to pull some memory saving tricks out of

Take a look at the program line 'LET A=10'. Here, you can see five bytes and there are six bytes used to store the floating point representation of the number. (Check out page 122 of the Spectrum manual if you don't believe me!) As these all consume excessive amounts of memory, we'll take advantage of two ways of saving space when using numeric values.

First, make all numeric constants into variables if they're used a lot during a particular program. For example, if 'LET A=1' is converted to 'LET A=PI/PI', you'll save three bytes the first time round; then if 'a' is used to replace all the appearances of the digit '1', you'll save five bytes each time. The 'overhead', however, is that you've now got a variable 'a' using up precious space in the VARS area of memory.

The next area of conservation is when dealing with numbers that appear less frequently — for instance, if you convert RANDOMIZE USR xxxxx to RANDOMIZE USR VAL "xxxxx", you'll save three bytes each time you use it. Have a look at the table included in this article, providing a number of ways to save memory space.

Another very useful tip that I've not seen many people make use of — but which is good for extra clarity and space saving — is the idea of using labels instead of numerical references in GO TO and GO SUB statements. This not only aids reading a program but is also useful when writing/debugging since all labels are set up, say, in the first line and can then be used in association with the LIST command; it's certainly much easier to remember a label than some obscure line number!

Anyway, using just some of these methods, you'll find that, by changing only the Basic bits of software you want to convert to Microdrive operation, you'll save enough room to allow it safe passage on to cartridge.

THAT DARNED CAT!

One of the greatest problems with Microdrives is their lack of filetype descriptors in the catalogues produced when using 'CAT D'. However, by clever use of the 10-byte filename allowed, the problem can be alleviated to quite a reasonable degree. The method suggested here is to adopt a name and extension to indicate a filetype (BASIC, CODE, DATA or PRINT, for example). So, to store a program written in Basic, you'd use a filename such as 'MATHS.BAS'; a code file would be stored as 'MATHS.COD'.

Other extention types that can be used are: '.TXT' for any textual files; '.PRT' for any PRINT files generated using an OPEN # statement; '.DAT' for data files; and '.TMP' for temporary files that'll only be stored for a short while. The only drawback to this is that the name part of the descriptor is now restricted to a mere six letters, but this is a small price to pay in relation to the information provided on-screen.

OPEN ACCESS

If you're the proud possessor of more than one Microdrive, you may well have come across the following problem. If you load a Basic program that autoruns and subsequently loads another lump of code from a different drive to the one it was saved on, you'll find yourself in all sorts of trouble. The reason this causes a problem is because the loader program makes explicit reference to a particular Microdrive and then tries to access it, whether or not it's the Microdrive required.

However, there's a simple solution to this problem — and it involves the following routine:

LET d=PEEK 23766 LOAD "m";d;"name" CODE ... (any type of file)

Watch out though! The PEEK statement

CONSERVATION TABLE

Number	Equivalent Form	Bytes Saved	
0	NOTPI	4	
1	PI/PI	3	
10	VAL *10*	3	
n<255	CODE "ASCII CHR"	2	

The conservation of bytes is important if you've got to lower RAMtop before Microdrive conversion can take place. Here are a few 'tricks of the trade' to get you going.

must not be embedded in the load statement; if you do, you'll get the 'Invalid drive number' error message flashed up on-screen. The reason this happens is probably due to the fact that the old ROM line scanner is not in use and hence, the line scanner in the Interface 1 ROM is not able to cope properly. The actual value being PEEKed here is the new system variable D__STR1; this is normally a two-byte variable, but when

```
1070 DEF FN a(a) = PEEK a + PEEK (a + 1) * 256

```

This is a versatile header reader program, that you'll need to find out the start and end address of the code of a particular program.

This is an improved CAT program, allowing you to print up to 40 filenames up onscreen at the same time. MICRODRIVIN',

used with Microdrives it usually contains a single byte reference to the particular Microdrive in use (since the last Microdrive used will do the same, you can use this bit of programming in your loader). Although the loading time of the Microdrive is, in general, very fast — in fact, of the order of seven seconds maximum if the access is made in the first pass — it can be speeded up still further by utilising the technique of saving more than one copy of the program on the cartridge. You can do this by POKEing the system variable COPIES (address

23791) with the number of copies required; this number is normally set to value '1'; and will be reset to this after you have made however many copies you require. The command to carry out the saving is shown below:

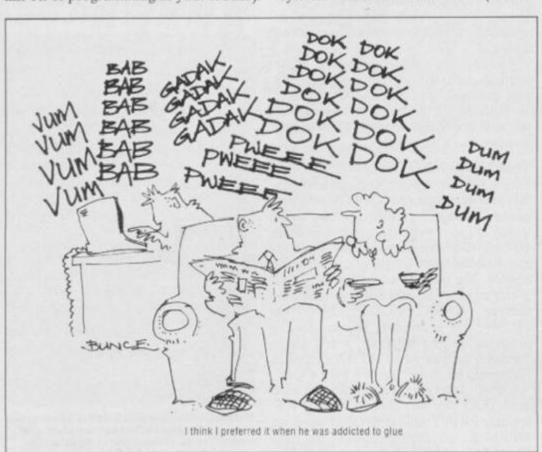

POKE 23791,10: SAVE ""m":1: ...

The above command would be used to save ten copies of the program specified later on in the expression. This procedure will be useful when the tape is fairly empty and it's taking a fair time to access the data.

To give you a bit of further help using the CAT command, you'll find a listing that provides an improved double-screen version of CAT. What you'll get is a catalogue of the Microdrive's contents listed in two columns, thus giving up to 40 names on-screen before the 'Scroll?' message pops up. This will mean you'll be able to see clearly what's on each Microdrive ... but the program's been geared to read only ASCII characters and not tokens; the tokens can still be read, although they might slightly upset the display format.

Well, that's it for now. Using the techniques outlined here, you should be able to make much more of the Microdrives. And if you've got any more hints and tips for those attempting Microdrivin', let's be hearing from you ... we have the technology, but there's still a fair way to go before the Microdrives come up to the usefulness of disk drives on other home

computers. Go for it! Vs

KEY FEATURES OF YS MEGABASIC

- An extended command set. YS MegaBasic recognises over 35 new commands, which allow you to access the new features available as well as providing the opportunity to make more of the commands in standard ZX Basic.
- 64 columns of text. Useful for wordprocessing and database applications.
- Three character sizes. Using YS MegaBasic, you've now the choice of accessing double-height, standard and half-width characters.
- Three character fonts. YS MegaBasic offers three font styles which allow your Spectrum to mimic other machines on the market.
- Windows. You can manage up to six QL-style windows on-screen at any one time.
- Sprites. Using the free Sprite Designer package that accompanies each copy of YS MegaBasic, you'll be able to design and manipulate up to ten sprites on-screen at once!
- Enhanced sound. Mike Leaman's taken the Spectrum's BEEP command and given it the full Mega-treatment.
- Procedures. Structure your programs and define new commands - it's all here!
- Stippled characters. QL-style stipples allow you to mix colours on-screen to give interesting colour

For the benefit of our English readers: we offer richly illustratred adventures from x-cellent software, Sweden.

With the compliments of the season, Dave Nicholls and Sue Denham set out to track down the missing room in Jet Set Willy. Won't you join them?

Over the past year or so, here at YS we've been inundated with letters telling us how to POKE this and that in Software Projects' Jet Set Willy. And, not only that, but JSW has been a consistent contender for the number one slot in the YS Top 20. In fact, we get the impression you like the game. So much so, that we've decided to break one of the biggest trade secrets in the software industry ... and tell you that, as many suspected, there is another room in Jet Set Willy!

がおいかいと

WHEN IT RAINS, IT POURS!

The missing room — April Showers — has still yet to be found. Although here in

the YSTowerblock we heard rumours of its existence months ago, it's taken many months of codebusting before Dave Nicholls eventually cracked the code that would expose it to the world! And that's what we've got for you here...

Of course, being a 'clever clogs', Dave's not telling us where it is! We've been searching round the rooms for the past week or so and no-one in the YS offices can find hide nor hair of it. Of course, sneaky ol' Dave Nicholls keeps popping his head round the door, asking if anyone's found it yet. It wouldn't matter so much, but he doesn't even try to suppress his smile...

Anyway, being too busy now working on the May issue of our magnificent magazine, new editor Kevin Cox isn't letting us have any time off to search for April Showers — so it's up to you! As encouragement, though, we're going to offer a little prize — say, 10 assorted Spectrum games — for the first letter, pulled at random from Kevin's hat, telling us where the missng room is. You've got 'till the end of April to find it and write to us with its exact location. Send in your entries to the YS April Showers Compo, Your Spectrum, 14 Rathbone Place, London W1P 1DE. We look forward to your replies!

TYPING TIPS

All you have to do to uncover the missing room is to type in the listing given and save it to tape. Once you've done that, load it back into the Spectrum and RUN it. (Don't worry if the screen goes blank for a few seconds ... that's meant to happen!) When you get the 'Insert Jet Set Willy master and start tape' message onscreen, don't just sit there — get on with it! The JSW game will load as usual and will play as normal — except that you've now got 61 rooms!

Note that all the POKEs Software Projects gave us to cure the Attic bug and solve the problem of reaching the prize under the Conservatory Roof have been included already in the listing given, so don't try and add them again. Of course, if you want to add your own POKEs (infinite lives and so on), you can do this between lines 320 and 380 — but don't leave anything out from the listing.

And that's it! Don't forget to tell us where the missing room is. And make it soon ... it's driving us mad trying to find it!

This here's the listing you'll need to type in to uncover the 61st room in Jet Set Willy. Type in the program as it stands and save it to tape. (You can add your own POKEs between lines 320 and 380 as long as you don't take anything out — but don't bother inserting the cures for the Attic/Conservatory Roof bugs 'cause they're already there!) Now load the program back into your Spectrum, RUN it, wait for the message to come up on-screen and then play the JSW master tape. That's all there is to it! So, where's the room?!?

Reg. in England No. 30680

From their bench on high, our regular jurors — Ross Holman, Roger Willis and Dave Nicholls — pass judgement on the latest and greatest games software!

HELLFIRE

Melbourne House/£6.95

Roger: "Re-enacting the trials of Ulysses" through the good offices of arcadia should be cerebral and poetic, 'cos when Ancient Greeks did their derring-do, even a punch-up outside the boozer was worth about 48K of epic verse. But somewhere in this knockabout translation of stupendous and stirring stanzas into mundane machine code, excitement is lost and cultural dilution occurs on the same scale as the day you discover that doner kebabs contain nothing more than reconstituted donkey lung!

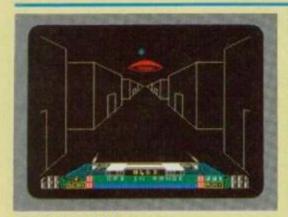

On-screen odysseys involve hopping up hummocks and dodging dangerous debris, to enter a sacred temple lurking inside the mountain. Erratic keyboard control suggests that our hero has already been at the Retsina. Once indoors, sneaking past terminal minotaurs by nipping from pillar to pillar is the business, followed by a maze in which monsters can be bonked on the bonce.

It took the 'real' Ulysses a fair few years of frenzied and fantastic fisticuffs to fight his way home to mum. Try to be a bit quicker, or you'll end up pulling the plug with boredom, as I did. There again, I'm only a legend in my own lunchtime . . . 1/5

Ross: it says on the cassette insert that it takes a week on average to complete.

Well, it didn't quite take that

Dave: There's some very nice, thoughtful screens in this game but, overall, I'm not sure there's enough here for a hit. 2/5

BUGGY BLAST

Firebird/£5.95

Roger: Now as years come and go, the few remaining hairs get torn from my wrinkled scalp in abject frustration and anger at the production of games like this!

Sure, you can get them good ol' rocks off zapping orbital thingies, totalling helisomethings and body-swerving round the occasional radiation-storm-in-a-teacup or, er, was it another orbital saucer? Your space/ground attack vehicle may well be splatting robotic mutant Lurgons with the photon laser or Xion phaser equivalent of a knuckle sandwich but, in the final analysis, you will still be playing Space Invaders. And that, if you remember, is where we all came in.

Fiddle-faddling on-screen antics lead eventually to you guiding your blastercraft down a 3D tunnel. But then it's just a matter of zapping robots and the odd flying saucer! Thrills ...

As we tear pages off the calendar and save for our toupees, the plot thickens in both senses. 3D graphics, programming complexities and fanciful story lines may prolong active life like any reasonable dog's dinner, but it's still the same plot and you've got to be thick if you haven't noticed. 2/5

Ross: This one's a bit like a cross between Star Wars and Time Gate. Not a bad 'shoot 'em up' game, but not worth going 'gold' about. 3/5

Dave: The graphics are really nifty but, despite their prettiness, they don't make up for the game itself — it's just not original enough! 3/5

BLUE MAX US Gold/£9.95

Roger: I've seen this one before — on the Atari and Commodore 64 if the ol' grey

matter serves. And it was a lot better than this!

There I was, togged up to the nines ready to go off blasting at the Hun in yer typical World War I dogfight — and my on-screen jalopy looked a bit like a C5 'killer' with wings! Once you've got the hang of it, bombing factories and bridges relieves a few minor frustrations, but I reckon the whole game's based around trying to land your plane and take off again. Well, it's the only bit that gave me any real trouble! Of course, it might have had something to do with having a propellor with a single blade!

They tell me that the reason the screen's such a mess is something to do with things called 'attributes'. Well,

whatever they're called, it's 'orrible!

The whole game's just a rip-off of Zaxxon anyway, so if you don't mind changing your surroundings to the wilds of outer space I'd plump for one of them. Bally bad luck,

Ocean! 2/5

Ross: A very old game that offers little that's new. The attribute problems don't exactly help the graphics and there doesn't seem to be a lot going on. Let's hope other US Gold offerings turn out better than this. 1/5

Dave: Why has my plane only got half a propellor? Or is this just an excuse for my

propellor? Or is this just an excuse for my score? Or is it that I fell asleep with boredom? (Answers on a

postcard...Ed). 1/5

THE AGE OF THE R.A.T

CONVENTIONAL JOYSTICKS ARE DEAD!

The Cheetah Remote Action Transmitter is the most sophisticated computer controller available.

It has these features:

- Infra Red transmission so there are no leads trailing across the living room. Just sit back in your chair up to 30 feet from your machine.
- Touch control no moving parts, extremely fast, long life.
- No extra software required.
- Can be used with all Cheetah RAT/Kempston compatible software.
- Fits comfortably in your hand for long play periods.
- Comes complete with receiver/interface unit which simply plugs into the rear of your Spectrum.
- Compatible with all Sinclair/Cheetah peripherals via the rear edge connector.

Simply incredible at £29.95 including VAT and p&p.

Dealer enquiries welcome. Export orders at no extra cost.

Send cheque/p.o now to:

Patent Panding

Cheetah Marketing Ltd. (Dept. YS), 24 Ray Street, London EC1R 3DJ. phone 01-833 4909

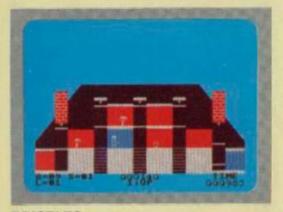

Cheetah products are also available from branches of

and all good computer shops.

JOYSTICK JUR

BRISTLES Statesoft/£7.95

Roger: Toshing out the crumbling walls of the Willis ancestral pile with half a gallon of budget emulsion was never like this. Bristles is about painting and decorating, a subject which I sincerely doubt is close to anybody's heart, but manages an appeal to lovers of quick-fire arcade activity through a sort of covert complexity

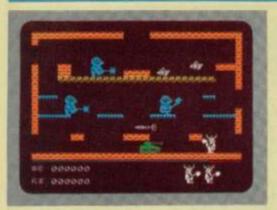

At first sight, simplistic graphics representing the eight houses to be attacked by brush - with a choice of skill levels and the odd bit of trickery stirred in to give it gloss (sic, sic and sic) — are enough to make anybody fall asleep on the job. Its speed and scoring system just about save the day, however. Climbing up the skill levels introduces any aspirant tosher to the delights of working with clear varnish or doing it in the dark.

All sorts of graphical oddities get in your way, banishing you back to the start. There are also elevators that can transport you all over the shop. However, having this info lodged in-brain did little to help me on-screen!

Why, playing this game could be just like serving an apprenticeship without getting magnolia all over the carpet. 2/5

Ross: The graphics are pretty awful, but the game was certainly fast. It gets really frustrating round about the sixth and seventh levels! 2/5

Dave: Colourful, if crude, graphics — shame about the tunes! The sort of game that gets you asking that allimportant question. Why? 1/5

BRIAN BLOODAXE

The Edge/£7.95

Ross: Brian Bloodaxe is the first game to feature 'Primary Imbalance'. Hmm presumably that means it's really zany

and has whacky graphics!
As Brian (the Viking), you have to slog through some 104 screens in an attempt to collect the crown jewels, and anyone who manages it can sit on the Throne. In fact, the game's a 'Jet Set' look-alike, but one that's made more complex than most because of the need to carry up to three objects at once and use them in various locations - for example, a red key raises a red portcullis, and so on.

The graphics which inhabit the various screens are all well drawn and animated, and some are very large indeed. They'll not kill the instant you touch, but each contact reduces your energy level.

You can use the graphics to assist your progress on-screen - by hopping on and off them! The game is not as precise as

JSW but it does offer something rather different.

Some screens repeat, which suggests there may not be 104 unique locations in total. On the other hand, that's more than made up for by the wide variety of things Brian is able to do. This one is worth a go! So, go for it! 4//5 Dave: At first sight I thought 'Oh no! Not another platform game!'. But I was wrong there's much more to do than usual, and the some of the graphics are superb! 4/5

Roger: Another JSW clone, but who needs it? I certainly don't - I want one where you ride a motorbike on-screen . it, you Edge people! 2/5

SYSTEM 15000

Craig Communications/£9.95

Dave: System 15000 is a hacker's dream and British Telecom's nightmare! Here, you get to play a happy hacker who's

been recruited to help your friend Richard recover \$1.5m taken from him by REALCO, a large corporation that's got some real nasty criminal connections! The money has to be returned to Richard's company account at the Midminster bank, and to help you in your quest, there's some sophisticated communications software (called 'System 15000') that's so advanced you don't even need a phone!

Another friend, Mike, has supplied you with some initial information and a phone number to get you started - but from here on in, you're really on your own. Work your way methodically through the various passwords and phone numbers as you go - and later, rather than sooner, you'll crack the game, to the stage where

you'll actually believe what you're doing: the 'ringing' and 'dialling' sounds and engaged tones make this a very realistic

System 15000 is a sort of cross between adventure and strategy that'll obviously appeal to hackers everywhere. But it's also a novel idea that's worth a look just to see what Prince Phillip could be doing if he had a mind to! 4/5

Ross: An unusual idea this, and one that should appeal to all those would-be hackers that can't afford BT's telephone bills. 2/5

Roger: Half the time I couldn't tell if the game was working or not - a game for those who like looking at blank screens! 2/5

CYCLONE Vortex/£6.99

Roger: Whoopee! A game that starts with a helicopter take-off sequence and flight

that I can actually manage without theoretical hospitalisation - that came later! Crashing programs on my own high-mileage equipment or, even worse, Peter Shaw's much-sabotaged and hybred in-office recyclable Speccy was far more frustrating than launching Cyclone's rescue chopper in its urgent hunt for pain-relieving drugs.

This moderately three-dimensional saga requires pilotage of the aforesaid whirlybird in and around a seascape full of islands - don't worry, there is a map to collect a vital five crates of medical supplies before the nasty cyclone upsets accident statistics, particularly those relating to, er, helicopter pilots. Don't be bored by the meteorological overtones,

though, because we're not looking at weather forecast yawn quotients - this is what I call action!

Unoriginal it may be, but as one disaster area playing in another, I can only claim to have had a good time ... 3/5

Ross: This is rather too similar to TLL, offering very little that's new. The playing area is more dispersed and there's some extra shading to show the cliffs. There are also some planes flying about, but so what! 0/5

Dave: Good use of the graphics techniques developed for TLL, but there doesn't seem to be enough going on to give it a really lasting appeal. 2/5

HISOFT

ULTRAKIT £9.45

The most powerful toolkit yet for ZX BASIC. All the features you will ever need; AUTO insert, full RENUMBER, block DELETE, CLOCK, ALARM, error trapping, break trapping. Full TRACE with single-step and much, much more. Makes ZX BASIC easy-to-use and powerful.

DEVPAC

£14

An excellent assembler, an advanced line-editor, a comprehensive disassembler and a superb 'front panel' debugger all in one package. Used by many leading software houses to write their games. "Buy it!" Adam Denning 1984.

PASCAL

£25

A powerful and almost full implementation of Pascal - not a Tiny Pascal. A valuable educational and development tool, programs typically run 40 times faster than a BASIC equivalent. Spectrum version includes Turtle Graphics package. "I haven't seen any other compiler that could match Hisoft's Pascal"

HISOFT

180 High Street North Dunstable, Beds. LU6 1AT Tel: (0582) 696421

HISOFT

for the ZXSpectrum

Hisoft is pleased to announce a new compiler for this popular and effective systems programming language. Not a tiny-C but an extensive, easy-to-use implementation of the language. Allows direct execution of compiled statements. Supplied with function library. Available direct from Hisoft for £25, or write for further details.

All prices, UK delivered, relate to 48K ZX Spectrum versions. Our software is available for many other Z80 machines e.g. Amstrad CPC 464, MSX, Memotech, SHARP MZ700, New-Brain, CP/M etc. Please write for details.

DEALER ENQUIRIES WELCOME

JOYSTICK JURY:

THE GREAT SPACE RACE Legend/£15

Ross: When a program's been hyped as much as *The Great Space Race*, it'd have to be something really special to live up

to the expectations.

Based loosely on the 'space trader' idea, the object of the exercise is to deliver consignments of a wicked alcoholic beverage called Natof to space stations spread around the galaxy. You start by choosing up to four racers to carry the Natof, and you decide which weapons you'll use to arm their ships. All potential candidates then present themselves and state their price; you see large pictures of them on-screen, and their faces smile, wink or grimace according to your choice.

The screen splits up into three parts during the race; the top part displays a menu of options and allows you to communicate with your racers, while the lower shows textual reports. The middle section is used for graphical output — for example, the racer you're talking to, or the space station that's approaching.

The problem with TGSR is that it doesn't involve the player. There may be some subtle character interaction going on, but it doesn't appear to make much difference to the player and it certainly doesn't justify the

Dave: This is simply a souped-up Dictator-type game which gives you the impression that you're not really needed anyway ... TGSR seems to play happily on its own. 0/5

Roger: Ugh! Well, compared to a party political broadcast it's great (in other words, it's dross!). 1/5

AIRWOLF Elite/£6.95

Ross: How d'you fancy being in the role of Stringfellow Hawke in Elite's officially licenced version of Airwolf? The plot for those who don't know, is that five important US scientists are being held hostage in an underground base and Hawke alone will rescue them.

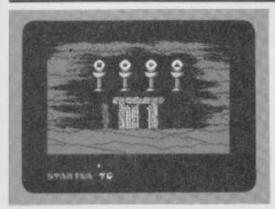

The game is only Kempston compatible and, although the keyboard controls are very responsive, they're not laid out as well as I'd have liked. But the helicopter graphic is drawn very well indeed and certainly behaves realistically; it tilts as you fly forward and falls under the force of gravity. In fact, all the graphics are very good, and there's clever use of shading to produce depth to the backdrops and a variety of colours.

The first obstacles to stand in your way are bands of anonymous blocks and these must be destroyed quickly, allowing no time for their replacement. The trick is to rapidly move the 'copter up and down while blasting away furiously. This is the best game yet from Elite and it's pretty difficult to play.

Definitely one for the masochists, 4/5

Dave: Pretty graphics, but not a very interesting game. It seems to be written in compiled Basic, and my combination of RAM Turbo interface and Quickshot 2 rapid fire crashed it wonderfully! 2/5

Roger: This must be one of the most frustrating affairs I've ever had with the Speccy! Good, but too difficult to hold my attention. 3/5

GIFT FROM THE GODS

Ocean/£9.95

Dave: This one comes in a large box, with a fairly comprehensive instruction sheet

containing the storyline. The tale concerns several strangely-named people and seems to have been written to confuse potential players so that they don't realise that this is just another 'move about in the maze, collecting things and putting them in the right place' game.

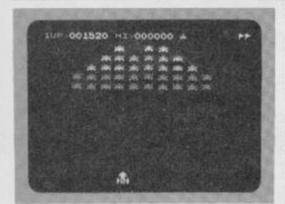

The object of this extravaganza is basically to collect the six 'Euclidian' shapes and place them in the Guardian's chamber. You're hindered in this task by the nasty Demi-Gods, as they've created lots of fake shapes to confuse you; you also have to make sure that your mother doesn't kill your sister.

Graphically, the game is very good with large sprites and several different types of 'nasty' all well animated. It also boasts an 'intelligent' joystick feature that stops you having to press loads of different keys; movements of the joystick (or keypresses) do different things when you're in certain locations!

Unfortunately, Gift from the Gods didn't really hold my interest, as there really isn't much to do beyond filling a large piece of paper with a map of the Labyrinth. 2/5

Ross: I don't think much of the Gods if this is all they can come up with for a gift. Another of the multi-millioned screen bores, but one that does contain pretty graphics. 1/5

Roger: Excellent graphics and . . um . . that's about it really! Hah, it's all Greek to me . . 2/5

GALAXIAN Atarisoft/£7.99

Dave: I'll always remember the day I walked into my local pub and discovered that the Space Invaders machine had

been replaced with something called Galaxians. The shock was so great that I had to have a drink pretty quick . . . medicinal, of course, you understand!

I soon recovered and spent many happy hours (and 10p pieces) learning the movement patterns of the aliens, until I could almost play the game just by listening to the electronic blips and buzzes that accompanied you through the levels. Now Atari has brought out the home computer version for the Spectrum.

To be fair, though, there have been several other *Galaxian* variants produced for the Spectrum, some of which were very good. But Atari's is the first to include all the elements of the original, such as the movement patterns that I struggled so hard to learn. The only real

difference between this and the original is in the way the meanies re-appear at the top of the screen.

OK, so this version's overpriced, but it's still one of the best 'shoot 'em up's around! If you want a trip down Memory Lane then buy it — but don't expect too much of the old fella . . . 4/5

Ross: Another very good Atarisoft offering that seems to have all the features of the original. The sound is good, the action fast and it plays superbly. Well worth collecting, if only for the nostalgic value. 31/5

Roger: Very close to the original. The only thing missing is the pub that used to accompany it! 4/5

JOYSTICK JURY:

POLE POSITION Atarisoft/£7.99

Ross: "Atari puts you in the driver's seat! Pass cars like they're standing still, but watch for those curves! One mistake and you could go up in flames!" So says
Atarisoft on the cassette sleeve of *Pole Position*. All the features of the arcade original are in the Spectrum version, from the qualifying lap to the vicious left-hand bend that appears just when you think you're doing so well. All the joysticks are supported and the controls are nice and simple . . . left, right, brake and change gear.

To qualify for the race you must first complete a lap within 73 seconds — and, once you've made the grade you get allocated a grid position.

Immediately the starting light turns to green, the other cars go speeding off—leaving you to do the best you can. The car accelerates automatically, leaving you to change into high gear at about

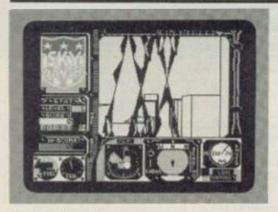

100mph. You soon start catching up with the other cars, though, and you'll get a satisfied feeling as you coast past them. Each time you complete a lap you're given a time bonus and the end of the race comes when you run out of time or complete three laps; you'll see a little chequered flag at the finish.

For my book this is the best Atarisoft game yet. It's also the best racing game I've seen on the Spectrum and it's eminently playable. 4/5

Dave: With the possible exception of Full

Throule, this has got to be the best racing game yet . . . but it's far too expensive! 3/5

Roger: OK, I'm smiling! This is a great game . . . better than any race game yet. Buy it! 5/5

SKYRANGER Microsphere/£5.95

Ross: The 'Watchers' are computerised law enforcers of the rather over-zealous kind — and they need to be stopped. As

a Skyranger, your task is to fly your jetcopter around the city, ambushing the Watchers and blasting them into smithereens with your ultrasonic pulse generator.

The screen has a large window at the top left which allows you to peek outside; it's surrounded by various instruments that show speed, height, fuel and the position of your foe.

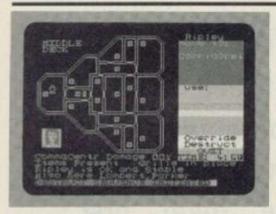

The view seen from the window is one of tall buildings, drawn in 3D-style vector graphics and through which you have to manocuvre. The 360-degrees radar shows the relative position of the Watchers and allows you to zip through the maze of streets on an intercepting course. If you manage to get in line with one, check your altitude and range, then blast it. Of

course, all the time you're moving your fuel is running out.

If you manage to destroy enough Watchers, you're given a code that allows entry to the next level. Overall, I have to express disappointment. The program seems technically proficient but it lacks playability and I found myself getting bored with it. 2/5

Dave: Nice graphics — shame about the game! Useful practice for the day when all cities look like New York and everyone owns a helicopter. I think I'll give it a miss. 1/5

Roger: Very pretty, very clever . . . and what's the point! The only thing I managed to kill was myself — all in all, a very unsatisfying experience. 3/5

ALIEN

Mind Games/£8.99

Dave: Alien is like no other game I've ever seen! You get to play the commander of

the space ship Nostromo which has been invaded by 'you know who'.

As commander, you have to realise that the crew have their own ideas (that is, they're terrified!) and won't necessarily obey all orders. Also, if you've seen the film, you won't be surprised to find out that one of the crew is a 'company' android.

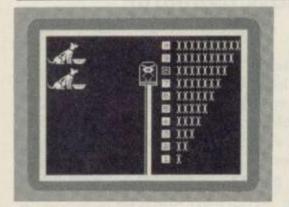

The control panel consists of a plan view of the decks of the ship — only one screen at a time — and you're provided with a list of options down the right-hand side; these options change depending on the situation. All action takes place in real-time, so once an order's given, you're free to go and 'talk' to someone else while it's carried out.

All in all, a very different, and difficult strategy game that takes some time to get into but is well worth the effort.

Remember in your bedroom, everyone can hear you scream — so keep it down a bit! 4/5

Ross: Very much an adventure game, but one that uses graphics to show what's going on and a joystick to investigate the action. But don't blink — one second, I was closing in on the Alien, the next all my crew were dead! Certainly worth a look. 3/5

Roger: Once I got the 'ang of what was going on, it was great. In space, you can hear me screaming for more! 5/5

LEARNING WITH LEEPER

Software Projects/£9.95

Dave: At first glance Learning with Leeper seems to be a very nicely produced piece of software.

On closer examination, however, I found that the programs were, in fact, written by Sierra On-Line and are only licenced by SP, and to be frank I'm not really sure why it bothered. There are four programs in the set that are supposed to help young children (threeto six-year olds) develop basic skills like pattern matching and counting. While the programs would no doubt do that if they kept the child's attention, in their present form they soon become boring because of the overlong pauses between games and the slowness of the games themselves. In fact, the four-year old that I got to try them out played each game only once before he wandered off to do something

else

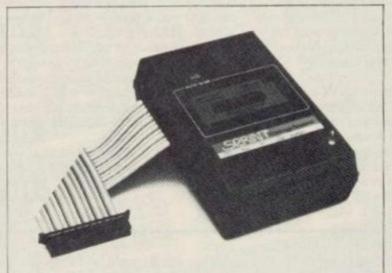

If the games could be changed so that the tunes were shorter and the graphics moved faster, the package would certainly be worth another look . . . but even then, there would probably be too little variety for lasting appeal 1/5

Ross: I couldn't really see these four games helping anyone very much — true, they might even be entertaining . . . but they don't seem very educational. 1/5

Roger: If you're having problems making up bedtime stories for the young 'uns, here are four programs guaranteed to send 'em to sleep! 1/5

The SPRINT, loads at four times speed!

The Sprint loads standard cassette programs at high speed without having to resave them first.*

Microdrive compatible version now available.

The Sprint, from Challenge Research, loads and saves programs on the Spectum four times faster than normal. Both commercial and home recorded programs will load at speed, and they do not have to be resaved to do so.

Price: £64.95 inc VAT and p/p

Off-line switch version £5.00 extra — to suit Interface 1, Centronics I/F printers etc.

Features: Retains standard commands, no software to load first, has internal ROM containing 4× speed routines. Connects via 56 way ribbon cable, no interface, has its own full expansion slot at rear. 3 digit tape counter and auto-stop system.

Order from: Challenge Research Ltd,

218 HIGH STREET, POTTERS BAR, HERTS

V754 (0707) 44063

(*Turbo-load programs require resaving to Standard tape format.)

Il you'll need to enter this month's magic competition is a copy of Quicksilva's latest mysterious arcade adventure — Mighty Magus! Then, if you can answer four simple questions about the game, you're in with a pretty good chance of taking home a lot more great software from Quicksilva. What a wizard game!

THE PLOT

In the game, you get to play the part of the old wizard, known throughout the land as the Mighty Magus, and it's your final task to destroy your old adversary — the giant dragon that lurks at the bottom of the Rising Sun Temple (Sounds like a Chinese takeaway to me! Ed.). Unfortunately, you haven't just got the dragon to contend with — no such luck! And, if it weren't a question in the compo, we'd be happy to depress you with blood-curdling descriptions of all the other nasties in the labyrinth!

So, that's the last you've heard from us about the game. You'll just have to play it yourselves if you're going to be able to answer the following questions:

- 1. How many levels must you go through in order to reach the dragon?
 2. Which level does not exist?
- 3. What other dangerous creature inhabits the dragon level?
- 4. Name or describe three other inhabitants of the Rising Sun Temple?

THE BOOTY

If you're one of those people that don't enter competitions because you don't reckon your chances of coming away with a prize, then keep reading! The first prize and runners-up awards might not be a mega-huge, but there are lots of them — which gives you much more of a chance of winning!

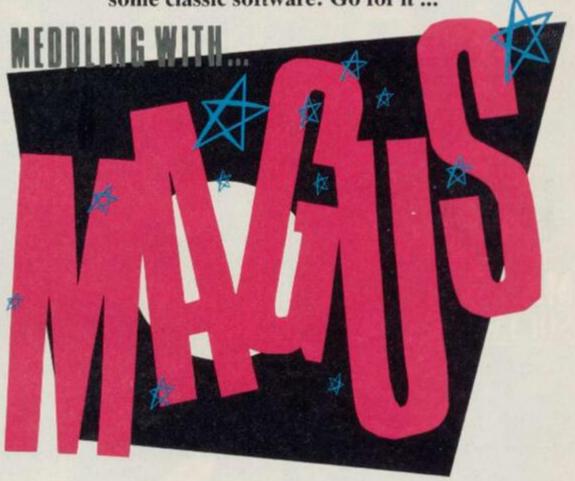

Quicksilva is stumping up 25 first prizes of any three of five of its classic games — Zombie Zombie, Battlezone, Strontium Dog — The Killing, Gatecrasher and Fantastic Voyage! And, for the 50 runners-up, there's your choice of one of the five games ...

Send all your entry coupons to Quicksilva Competition, Your Spectrum, 14 Rathbone Place, London W1P 1DE.

QUICKSILVA RULES OK!

- Entries for the Quicksilva Competition must be post-dated no later than April 30th, 1985.
- Each entry form must have the answers to the four questions and your selection of the three Quicksilva games you'll want if you win (plus an indication of your favourite should you be a runner-up).
- The Editor's decision is final and no correspondence will be entered into regarding this decision.

The Gamelords of *Quicksilva* have got together with the cringing creatures from the *YS* Towerblock to bring you a competition in which you stand to win some classic software! Go for it ...

QUICKSILVA COMPETITION

Having cracked Quicksilva's Mighty Magus and battled the dragon to submission, these questions seem ridiculously easy! However, for the chance of nobbling some free software, here are my answers:

I	
2	
	oss beside my three favourite games, and I've underlined the one
	should Quicksilva be mean enough to make me a mere runner-up!

MAGAZINE HEALTH WARNING

Calling all those of you who are contemplating adding graphics to your adventure programs. Chris Wood has devised a couple of screen compressor programs that'll 'scrunge' those screens and save those precious bytes.

What we're talking about here is a twoin-one 'screen scrunger' - or screen compressor, if you prefer - that's fast, relocatable and short (less that 50 bytes each!). Using either of these routines, or a combination of both, you can 'scrunge' most screens down to at least half their original size and, with a built-in relocatable screen scrunger saved as standard with each picture, you can have between 10 and 15 screens stored in memory at any one time!

Adventure writers only require the top

third or so of each screen saved, which is why the program included does this . . . and even lets you move bits of the screen around. The only restriction on saving parts of the screen is that attributes have to be compressed separately; this is because the program can only handle continuous chunks of memory.

ON-SCREEN STORAGE

At this stage, there's no need to go into too much detail about how the Spectrum's screen is laid out - but if you've

The 'screen scrunger' program should be initialised with 'RUN 1000' to set up the data in lines 1009-1020. Once the data has been initialised, the program flow is directed to the menu of options offered by the scrunger.

SQUEEZE ME!

got a couple days spare sometime ... Suffice to say that what you see on-screen is no more than an area of memory that we can see and, as far as the Spectrum's concerned, it's nothing but a jumble of

In the meantine, here's some information on how the scrunger routines work . . . and why you need two of them! Take a look at a few SCREENS pictures and you'll see there are quite a few large areas of the same colour - from which you'd

summise that the same value is popping

up in memory quite often. You'd be

the screen memory counting the number of times a particular value pops up until a

different value is found. Once another

value has been found, the Spectrum res-

ets its internal counter, stores the data

Thus, our first routine dives through

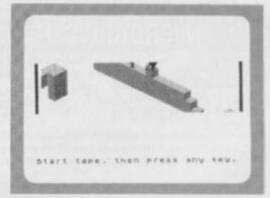

binary figures.

right!

First of all, you load up the 'Screen Scrunger' program and type RUN 1000. Now, load the SCREENS — in this case, a view from Quicksilva's Zombie Zombie and it'll be stored in a high location in memory. The program will then move on to the options screen ...

INPUT LIMITS 64 TOP OF INK 78. HIDDLE OF IN 88. SOTTON OF INK SS. TOP OF STIBIBLIES 89. HIDDLE OF STTRIBUTES 90.BOTTOH OF STTRIBUTES 91.END OF SCREEN END? C

The options screen allows you to choose whether you want to scrunge the whole SCREENS or just a portion of it. In this case, the middle section was scrunged by typing in '72' and '80' as the parameters for the compression.

The program offers you the option of saving the compressed SCREEN\$ code — displaying the relevant section on-screen whilst saving takes place. The 'Screen Scrunger' itself will advise you as to which routine is the most efficient for the SCREENS you're scrunging.

SCREEN SCRUNGER

and carries on looking through the rest of the screen memory. For example, the following data '1,1,1,1,1,2,2,2,2,3,3,3,3' in screen memory would be scrunged and stored as '1*6,2*4,3*4'.

As the routine allocates a single byte to store the internal counter, if there's more than 256 occurances of the same value the counter resets itself and the next value is treated anew. For example, a row of 400 twos becomes '2*0,2*144' (where a zero value denotes '256').

FOR MY NEXT TRICK . . .

The first routine will suit most screenscrunging requirements, but very complex screens with few repeated values can trip the routine up. For example, a block of memory that originally looks like '1,2,3,4' becomes '1*1,2*1,3*1,4*1', and four bytes is transformed into eight — not a good method if complex illustrations, such as the start-up screen in Lunar Jetman, can grow to around 7.5K instead of the usual 6.5K!

And this is where the second routine comes in. Complex visual screens, such as Ultimate's, require a routine that just takes all the free bytes (that is, all the zeros in the background) and just squashes all the rest of the data up. Using this method, you can't help but make a saving.

However, to make the second routine even more clever, it's also programmed to take out the 255s that occur in solidly-filled blocks of the screen. You'll be glad to know that the *Lunar Jetman* screen mentioned earlier is scrunged happily down to around 4.5K!

But don't start worrying which routines you're going to have to use with each screen, as the Basic program (the two routines are provided in the data statements) tells you which 'scrunger' is the most efficient for each case.

To make use of the 'scrunged' screens saved by the program, call the machine code from the same address at which you load the code; each picture saved is accompanied by a screen decompressor routine at its start. For example, if you want to put your 'scrunged' screen at address 40000, you'd get it back onscreen by executing 'RANDOMISE USR 40000'. Happy scrunging, my dearios!

TAPE COPIER 6 (new) MICRODRIVE 1

(plus disc/waferdrive transfer)

Make your essential BACK-UP copies with our second generation copies TC6. It copes with the vast majority of programs, with new UNIQUE advanced features. 48k Spectrum only. Makes your old copier reduntant?

- Deals with fast loaders + converts them to normal speed for drive transfer.
- LOADS in program parts CONTINUOUSLY even when there is no soung gap, short tone leaders, false headers, etc, making the process simple and effective. User friendly.
- Copes with v.long programs (say 65000 + bytes)
- Extra features e.g. integral header reader, pause, delete, abort, repeat copies, FULL Manual.
- M/TAPE this extra option GENUINELY copies BASIC, M/CODE + arrays onto MICRODRIVE, alters program names, etc.
- Updates for old customers £3, (£3.50 with m/drive) old tape and SAE TC6 £5.00 (WITH M/TAPE OPTION £6.00)

MICRODRIVE ONE (MD1)

48k Spectrum owners with m/drive can NOW transfer the MAJORITY of their programs (inc. headerleas, long programs, + those with LOW addresses — say 16384).

TC6 transfers the bytes, but MD1 has 5 programs to help you do the conversions to get them running + 2 "CAT" housekeeping

The manual has examples/exercises and we believe this widely acclaimed program (together with TC6) gives you an unrivalled opportunity for you to fully utilise your m/drive. Try it and see for youself

MD1 (WD1 for disc or Waferdrive owners) costs a mere £6.50.
ALL PRODUCTS CARRY OUR MONEY BACK GUARANTEE.

UTILITIES FOR THE QL

SIX programs on one Microdrive for the Sinclair

QL. "Nothing very dramatic . . . could be quite useful" (PCW).

1 "Boot"

Displays DIRectory in columns, and allows LOADing of programs with single key-press. Without this, the directory will overflow the screen if you have more than about 18 files on cartridge; also "load mdv1-program" has 17 keypresses!

2 Q Mark"

Will allow you to FORMAT a cartridge repeatedly (as recommended by SINCLAIR). You only have to enter a name and number once.

3 "Q Back"

Makes back-up copies of cartridges. One key-press will copy all files onto an empty cartridge, or you may single-step and choose whether or not to copy each file. If receiving cartridge is not empty, you will be asked whether or not to over-write any namesake of a file about to be copied. You can copy from many cartridges onto one until it is full.

4 "Q Prune"

Will delete any file with a single key-press, so be careful with this one!

5 "Q Print"

It spools files the printer.

6 Tool

Tool kit for programmers

Instructions

On Paper and in a QUILL file (for when you lose the paper!). All six programs, will work with the extra microdrives if you get them, and have been successful with cartridges holding over 60 files each.

£7.50 from

WD SOFTWARE (YS) Hilltop, St Mary, Jersey, C.I. Tel: (0534) 81392.

Tomorrows Dream Software Proudly Presents

TITANI

The debugging monitor utility for machine code programmes on the 48K Spectrum

Includes:

- Single stepping and breakpoints in both RAM and ROM
- Intelligent block move, block compare and block fill
- Conditional breakpoints at testable CALLs, JPs, JRs
- 'Hard' Break key even exits from endless machine code loops

Plus — 'Front Panel' display, many single stepping commands including execute subroutine, finish subroutine, place breakpoint and execute, etc, display of four memory windows continuously updated during single stepping, arithmetic operators + $-\times$ + and decimal-hex hex-decimal converters, ASCII dump, hex dump, disassembly, plus much more.

With complete instruction booklet

Only £8 on tape or £10 on microdrive from TDS

- Single stepping through graphics routines
- Intelligent masked string search routine
- Flexible direct memory editing features

DEALER ENQUIRIES WELCOME

Written any good software? We pay top rates for original programmes

Send this coupon to: TDS, Richmond House, 1B Sydenham Rd, Bristol BS6 5SH

BAUK SSUES

You can now obtain any back issue of Your Spectrum simply by filling in the coupon below and enclosing £1.10 for each issue you require. A complete selection of back issues of Your Spectrum is available from our shop in London's West End, two minutes walk from Tottenham Court Road tube.

The shop is open Monday to Friday, 9.30 am to 5.30 pm. The address is 14 Rathbone Place, London W1P 1DE.

BLITZ

ORDER YOUR BACK ISSUES **NOW!**

Please send me the following back issues of Your Spectrum (£1.10 each including postage and packing).

- ☐ Issue 1/1 ☐ Issue 1/7
 - □ Issue 1/
- ☐ Issue 1/10
- ☐ Issue 1/5
- ☐ Issue 1/8
- ☐ Issue 1/11
- ☐ Issue 1/6
- ☐ Issue 1/9
- ☐ Issue 1/12

Issue 2, 3 and 7 are now sold out, so don't waste your time ordering them!

I enclose a cheque/Postal Order for £ _____ made payable to Sportscene Specialist Press Ltd.

Name.

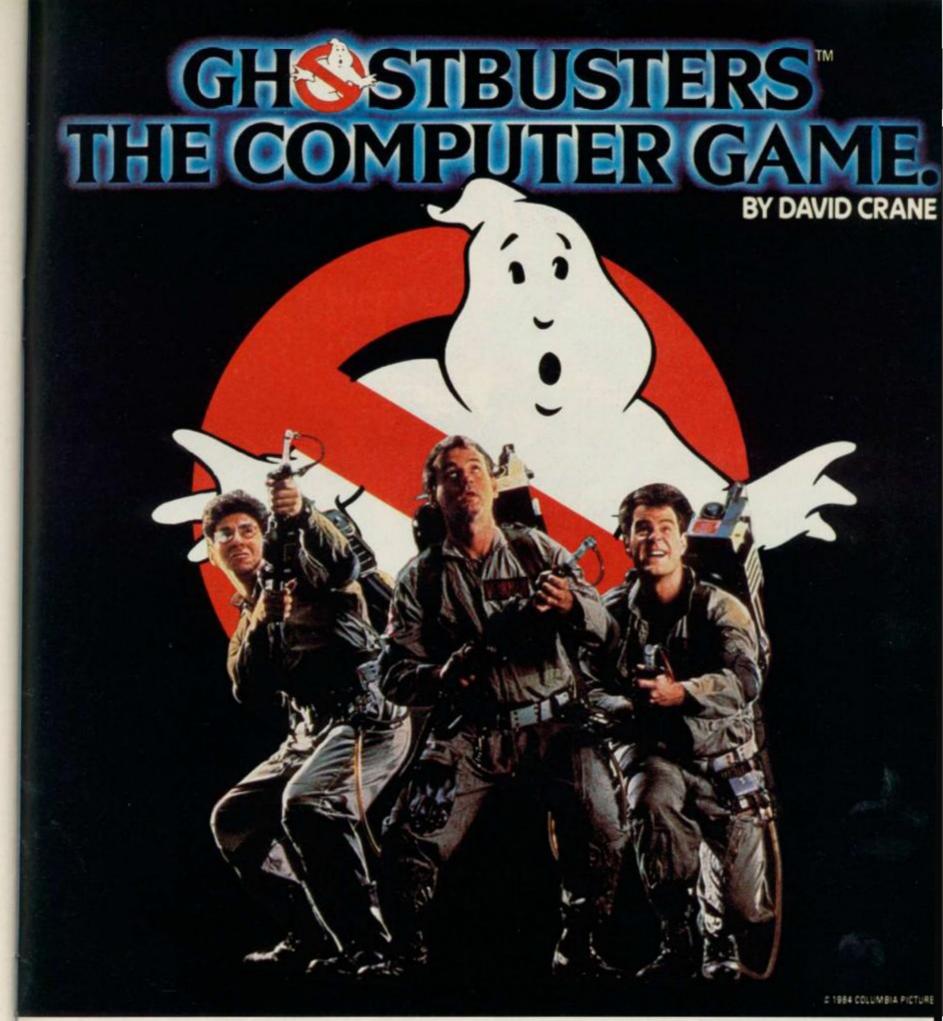

Address_

Postcode.

Date_

Please fill in this form and mail it immediately to: Your Spectrum, Back Issues, 14 Rathbone Place, London W1P 1DE.

You can use a photocopy of this form if you don't want to deface your issue.

Yes. Ghostbusters is a computer game, too.
The game play follows the film with incredible accuracy. Even down to the chart-topping music score.

Your task is to rid the world – and in particular New York City – of a cataclysmic plague of ectoplasmic nasties.

Play it well and we give you a Ghostbusters franchise—with your own secret account number. Use this number and the money it brings you, to buy the same ghost busting gear they had in the film. (Don't worry—we'll give you some money to get started.)

You will have earned it. And you can use it to go to undreamed of levels. Don't try to use someone else's number, we'll find out.

From then on, it's you against the ghosts. All the way to the Temple of Zuul.

Where the final battle begins...

Designed by USA's David "Pitfall II and Decathlon"

Crane and running on Commodore 64 cassette and disl
and Spectrum. Coming soon on other systems.

AVAILABLE FROM SELECTED BRANCHES OF BOOTS, WH SMITH, JOHN MENZIES, LASKY'S, SPECTRUM, RUMBELOWS, WOOLWORTH

All for the 48K Spectrum.

Available from all good computer shops.

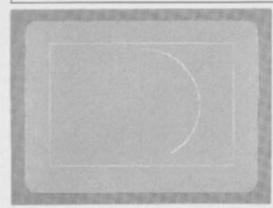

or direct from: MICROSPHERE COMPUTER SERVICES LTD,
72 Rosebery Road, London N10 2LA

PROGRAM POWER

Here's a double helping of listings to satisfy your appetite for good Spectrum programming, courtesy of Colin Barnsley and Peter Simmons. All programming contributions should be sent to Gavin Monk, Program Power, Your Spectrum, 14 Rathbone Place, London W1P 1DE.

SQUIRLER

BY COLIN BARNSLEY

With shades of the Spirograph designing tool, this program allows you to create some fine technically accurate graphics ... and some pretty ones too! Try some of the example inputs we've given you and then experiment with them. Practise makes perfect, as they say!

Hands up all you budding Dalis and Da Vincis who, having spent hours with the latest graphics packages, stand back from that flickering screen, wiping bloodshot eyes, only to come to the conclusion that you should have stuck to textual programs? And how about those tasks the Art tutor used to set using a piece of string and an eccentric cog that just didn't seem to, well ... work?

Well, here's a nifty little program that'll create amazing graphics

for you - all it requires from you is a few numbers!

er -

air

the

and

afer

like

een

at a

ght ner. 95

e -

ere ne. 95 The Squirler makes use of the INKEYS command, and the current state of the variables are displayed in the menu; INKEYS is used because, although it takes you longer to type this listing into the Speccy, the time taken to execute the program is reduced considerably. Another point to note is that the Spectrum calculates its angles in radians and the program stores it as such — however, as radians aren't the easiest quantities to work with, all the angles are displayed in degrees.

When you RUN the program, you'll be presented with a menu on-screen; take a look at the options you're offered in the table given. Once you've entered some figures, the program determines how many arcs it's going to need to draw before your masterpiece is completed. Then, once all the values have been written into temporary variables for manipulation (without destroying their original values), plotting begins on-screen. On a final note, if you choose a variable that results in the Spectrum kicking back with an

'integer out of range' error message, you'll have to start the program up again with 'GO TO 20'.

Do persevere with the program — it's not too long to type in, but some may find it a bit tricky to end up with a decent drawing first time out. Have a look at the sample inputs given ... and then experiment a little. You'll probably find you create your best designs by accident — but that's life!

OPTION	ACTION
start	The position on the circumference of an imaginary circle from which the very first arc is drawn; for example, '0' starts at the top, '270' at 9 o'clock, and so on.
degree swing	The number of degrees turned through — from the imaginary centre (x,y) of a circle — in one arc; thus, '60' gives a six-pointed shape, '72' a five-pointed shape, and so on.
x,y position	This gives the imaginary position of the centre of a shape in pixels; the co-ordinates of the screen centre is about (128,87).
plots	The number of full drawings that'll be completed in the final design.
x,y slide	The number of pixels to be added or subtracted from the imaginary centre after each complete drawing.
circle radius	The pixel radius of an imaginary circle in which the shape is drawn.
circle squash	The percentage reduction in size (per full drawing of the shape) of the imaginary circle's radius; thus, a 'cir squash' of '5' reduces the full drawing of the shape by five per cent.
bend	The number of degrees through which the direction is changed in one arc of a 'degree' swing'.
bend add	The constant number of degrees to add (for each complete drawing of the shape) to accomplish the required 'bend'.
degree revolution	The number of degrees of turn needed to end up at the starting point; thus, when n > 1, 'cir squash' and 'bend' gives a spiral effect.
plot	Draws the final design.

SQUIRLER EXAMPLE INPUTS

	CIRCLE	START	DEGREE	PLOT NUMBER	BEND	DEGREE REVOLUTION	CIRCLE	BEND ADD	X POSITION	X SLIDE	Y POSITION	YSLIDE

Datapen

A QUALITY LIGHTPEN

for use with the SPECTRUM computer

The DATAPEN lightpen enables you to create high resolution pictures and technical layouts directly on your T.V. screen. The accompanying software allows you to draw any shape or filled area you wish, to pixel accuracy, in full colour and the results may be utilised within your own programs, e.g. for animation, or to illustrate your title pages. At just £29 inclusive, the Datapen lightpen package represents superb value - just look at the actual screen photographs and you will agree that this must be the best value for money on the market.

- Incorporates features not provided with other pens.
- Push button operation on pen no need to use keyboard.
- Works under any lighting conditions.
- Plots to pixel accuracy.
- 20 pre-defined commands allow plotting of geometric shapes, including triangle, lines, circles, etc., text, or user-defined characters.

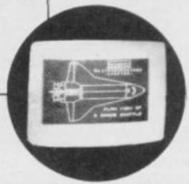

PLUS: 3 SOFTWARE **PROGRAMS**

- · Routines and ideas for your own programs. (Menus, games, music, etc.)
- User-defined graphics creation program.
- · Superb full colour drawing program as illustrated in these actual screen photographs.

- Uses all paper and ink colours.
- · A screen grid may be turned on and off, at will, to assist drawing.
- Flexible erase capability.
- All drawings can be saved to tape for further use
- Plugs in direct no batteries, additional components, or adjustments needed.
- Handbook, plus printout of routines for use in your own programs.

Send cheque or P.O. for £29.00 to: Dept. SU1 DATAPEN MICROTECHNOLOGY LIMITED, Kingsclere Road, OVERTON, Hants. RG253JB 0256770488 or ask at your local computer shop. Send S.A.E. fordetails. Lightpens and software are also available for 88C B. Dragon, CBM-64 and VIC-20

The 'BORDER draw' routine.

MYSTERY BOX

BY PETER SIMMONS

Mystery Box is a very complex game but, once you've grasped the principles, you won't be able to pull the plug. Simply move the arrow around the outside of the grid, fire the laser and watch carefully. You'll soon get the hang of it.

If you're a guru of logical deduction, then you'll have probably played this game before; it's better known as *Blackbox*. If such pastimes have managed to elude you then settle down for your first lesson in cultural awareness!

Mystery Box is one of those games that takes quite a while to get the grip of but, once mastered, is highly compulsive. The basic idea behind the game is that you can shoot lasers into the box and, by carefully noting where they reappear, you have to deduce the position of the pegs in the box. A laser can either bounce off the corner of a peg, be reflected back to the same position it started from or be totally absorbed in a head-on collision.

The aim of this highly complex game is to find the pegs in the fewest number of laser shots. In the YS office this game kept us going for quite a while and we managed to get the score down to 96 over the five rounds you have to play.

You can choose whether the Speccy will hide four or five pegs ... and, from our experience, beginners would be best to start on the

four peg option. And, now, on to the play itself ...

You move the laser around the outside of the box on-screen using the '9' key; when you want to fire the laser, press the zero key. If you think you've found one of the pegs, press the '0' key and use the cursor controls to guide a graphics question mark around the screen until it's flashing over the position you think the peg is in. Once positioned, press the 'P' key and the marker will be placed. If, at any time, you think you've made an error in your judgement, you place the peg by the same process, but this time press the 'U' key to remove the marker.

When you think you've got all the hidden pegs out in the open, press the '1' key and the computer will tell you if you got them all in the right position and update your score.

Once you've completed all five rounds, the Spectrum will report your overall score and ask if you'd like to indulge in another game. Press the 'Y' key if you're feeling brave ...

to add details of year end adjustments, such as Depreciation, Bad Debts, Creditors and Debtors, and prepares a full Balance Sheet and Profit & Loss Account. It even produces COMPARATIVE figures, such as budgets or previous years' results, alongside the current year's figures, together with notes to the accounts.

Written to the same specification as Gemini's widely acclaimed Accounting Systems for the BBC Micro and the Commodore 64, this BUMPER PACK for the Spectrum 48K represents quite remarkable value for money, and could easily save its cost in the first week of use! Business decisions can be made more quickly and profitably, based upon accurate, up to the minute, computer data, and vital management information is available from your 48K at the touch of a key.

Also available **BBC Micro**

Home Software Bumper Pack

Contains the following programs, all cleverly and excitingly written to follow up to leisure software to truly exploit the Micro's potential for ALL the family (including Mother))

C.0417 £24.95

Database: The Gemini Database Management System is a program designed to enable the user to store all types of information in similar format to a card indexing system. The program will ask you for the headings under which you wish to store the information on a 'card', i.e. for a record collection database these might be 'Artist', 'Song', 'Composer', etc., or for example in a database set up for a deep freezer, 'Use by date', 'Value', 'Type of food', 'Shelf', etc.

Having set up your fields, you may then add, delete or change information on the 'cards' under the headings you have elected. Gemini databases contain other important and useful utilities as well, e.g. alphabetical and numerical sorting, numeric calculations, finding records that meet specific requirements, line printer routines, browsing facilities, etc. For example a list of all recordings by a particular composer, calculate total value of freezer contents, etc.

Mailist: Gemini's Mailist program will enable you to keep a record of names and addresses and then ne, sort and find them, all with special selection techniques, containing our exclusive SEARCHKEY' system, giving you the option of creating your own dedicated coding system for each name on file. For example, on most mailing list systems, you are only given the standard heading such as name, street, town, country, postcode etc. With the Gemini searchkey system, you could find, say, all names on the file that are companies having a turnover in excess of '50,000' or all names that are subscribers who are behind in their subscriptions or all names that are eligible for a Christmas card this

A full and useful range of routines is included in the menu, and the program allows you to set up your own format for printing labels, i.e. the tab settings you require and spaces between labels, etc. Multiple copies can also be printed.

Graph Plot: Provides an easily assimilated visual representation of numerical data For example monthly sales statistics comparing two year's results may be instantly converted into two side by side pie charts, histograms or graphs... for easier visual comparison and assimilation. It is particularly recommended where any kind of mathematical plotting facility is required.

"Independent Press Comments"

- Gemini Cash Book, The Scotsman 12/8/83

"Will enable business people with a moderate grasp of accorroduce a set of figures that will satisfy both the bank manager and the Tax man Gemini Cash Book, Micro User, August 1983

> Home Accounts: Designed as a complete Home Accounting package, this program allows the user to set up a budget for items of household expenditure and compare actual expenditure with budget. A running total of all surpluses and deficits is available both as digits, and in the form of a bar chart.

A complete Bank account routine is included, together with suggested expenditure categories such as mortgage, rent, rates, telephone, gas, electricity, etc. However, these may be deleted or augmented without difficulty.

Here at Your Spectrum, we pride ourselves in providing you with the best in software each and every month. And how do we manage this amazing feat ... well, we don't - but you do!

A number of programs are submitted for publication from readers and, as you've no doubt gathered from past issues, the quality is pretty excellent. But that doesn't mean we don't want to hear from you - Your Spectrum is your magazine so make use of it. You're one of two million Spectrum users - don't just sit there, write us a program and be famous!

All we're looking for is a bit of originality, a sense of humour and some competent code. (Have a look at Gavin Monk's program in YS issue 10 if you're looking to nick some ideas to 'pretty up' your programs.) All we ask is that you don't type up a program from another magazine or book as we always find out in the end and your name will be mud throughout the industry.

(Remember the game, Ground Attack in YS issue 7? Well, the so-called author of that particular game (We wouldn't want to mention his name because that would be indiscreet ... Anthony Crawford. Ed.) stole it lock, stock and barrell from a weekly computer magazine; we didn't find out until after it had been published.)

As further incentive, we do pay a sizeable sum for good programs. All we ask it that each program comes on cassette, with a written introduction and an annotated listing. Please send all programming contributuions to:

Gavin Monk, Your Spectrum, 14 Rathbone Place, London W1P

Screen Machine.

If you're a 48K Spectrum owner, PAINTPLUS and SCREEN MACHINE can transform your graphics expertise in seconds! Just take a look at some of the things that are possible with

a little practice! YES they were all produced on a ZX Spectrum with no modification and using PAINTPLUS and SCREEN MACHINE.

These two packages are incredible PAINTPLUS is a complete upgrade of our previous program Print'n'Plotter Paintbox but with more than 24 new commands and facilities to give you every possible graphic tool

Some of the new commands are BOX DRAW, ENLARGE TO EDIT, PAPER WASH MODE, UDG GRABBING FROM SCREEN, AUTOMATIC MULTIPLE SCREEN FILES AND UDG BANKS ORGANISER and PAINT ROUTINES IN 5 PATTERNS AVAILABLE IN BOTH NORMAL AND OVER MODE!

SCREEN MACHINE allows you to take the results from PAINTPLUS and manipulate to save memory, recolour, enlarge and reduce, flip and relocate etc.
There's even a complete compiler for textl

Both programs now come with a copy of our 100 page colour book: PRINT'N'PLOTTER PICTURE BOOK and of course a fantastic Demo on side two of the cassette.

Everything is completely Microdrive compatible and easy to transfer to cartridge

So if you want to produce superb graphics on your 48K ectrum and you want to do it simply . . . simply send for a copy of PAINTPLUS and SCREEN MACHINE today or ask at your local computer shop.

Now with 100 page Print'n'Plotter Picture Book Full of Hints, Tips, Programs, instructions and Colour Illustrations!

Send today or ask your local Computer Shop

Post to: Depty's Print n'Plotter Products Ltd. 19 Barough High Street, London SEI 9SE (Credit Card order telephone 01-660 723) other enquiries 01-403 3622)

VULCATIVE ELECTRONICS LTD

200 BRENT STREET HENDON NW4 1BH TEL: 01-203 6366

Out on the fringes of the computer world, there are all sorts of people producing peripherals that Sir Clive never bothered about. Kevin Cox sparred with David Heelas of Dk'Tronics at the recent ZX Microfair - this is his blow-by-blow account ...

You don't have to be in the company of David Heelas for too long before it becomes clear why he had the idea for a Spectrum game called Minder. He and Terry McCann have a lot in common. They've both been around a while and seen a thing or two ... and neither pulls his punches!

Beginning my interview in a rather inauspicious way, I asked him what he was doing before Dk"Tronics? "I can't remember!," he replied. Fortunately, his convenient attack of amnesia passed and he soon became forthcoming about his time in the 'biz'

"I started four years ago just prior to the launch of the ZX81. Our first product was a 16K expansion pack for the ZX80. It was just me, then part-time, and I got interested because of my interest in electronics. The stupid thing was that I could see the market growing but not to the extent it has; although the ZX81 created the interest, it took the Spectrum to take it the distance.

"I went full-time with the launch of the ZX81. The business was all mail-order then, but I was getting a very good response. I had to do everything myself manufacturing, packaging, selling and posting - and I was working in my bedroom, my garage, my shed (Shades of Arthur Daley's lock-up! Ed.) anywhere there was room! But by the end of '81, I had four employees, a range of products including a keyboard for the ZX81 and new premises!"

What was your reaction to the Speccy? You must have blessed Sir Clive for that rubber keyboard!

"As soon as we got hold of the Spectrum, we re-vamped the ZX81 keyboard and brought out a version for the Spectrum at £45. Frankly, I didn't really think people would pay it, but it just shows you how wrong you can be. We've sold 80 to 90,000 of them to date. Fuller was doing the same thing but approaching

it all wrong - the product was OK, but the customer service was appalling.

No punches pulled here! Tell us about the recent take-

over of Currah. Did you have your eye on the company?

"No, we had no intentions of buying Currah whatsoever! But circumstances change and now it's done, it seems that taking the company over is a logical extension of our product range. We'd thought of doing a speech synthesiser but Currah had the market sewn up. Apparently, there was an article about Dk in the

computer press last November which prompted someone quite high up in Currah to phone me for a job. Something was obviously up, so I began talks with the company's chairman. Next minute, the receiver's called in and we're offered the whole company!'

So, how much did Currah set you back?

"Let's just say it was an undisclosed but substantial five-figure sum." (Whatever happened to 'No comment'? Ed.)

Do you intend to keep adding more and more to the Speccy or have you exhausted

its possibilities?
"We're certainly not going to desert the Spectrum, but we shall be broadening our base on to other micros. For the Spectrum we're releasing μ Source, an Assembler/Forth 'on-board' ROM - another product we nabbed from

Of course, what we really need is a product in our own right. We're going for microprocessor based consumer products - the first is due this year. I can't tell you exactly what it is but it will be connected with music and will have a screen and a music keyboard, all for about £100.

'It's come about from some work we're doing for Memotech. We're designing a music peripheral for Memotech to co-incide with its big sales push behind the Iron Curtain. I shall probably be going to Russia later this year, and from that project will come a similiar peripheral for the Speccy with a half-size music keyboard for about £30.

We've also got a slant on a new idea in connection with British Telecom. The short and curlies of the matter is that we're going for a US/M listing in 1986 and we need to strengthen our base. The shine has definitely gone out of the computer market."

Have you completely abandoned software?

"We made a lot out of software, especially in the period between 1982-83. But we decided that it was too much of a rat-race. When we started, a game lasted six months, but now you're lucky if it's around for six weeks! There must be around 300 companies chasing an ever diminishing market, and that's without considering piracy. Too much hassle all round! Still, we're releasing Popeye it could have been out now if the programmer hadn't done a runner on us - and, of course. there's Minder." David Heelas supped the last of his pint. "And that's not an easy subject to capture."
